

Instructions

Before use, please clean your canister inside with a damp paper towel - taking care not to get any moisture into the co2 valve (the white disk in the centre of the lid). Dry thoroughly before storing coffee as any moisture in the canister will damage flavor.

The tracking disks on the lid of the canister can be set to remind you of the expiry date of your coffee pack. The outer disk can be set on the day of expiration, the inner disk can be used for the month.

Store your Coffee Gator Canister in a cool, dry place.

DO NOT store in refrigerator or freezer.

The canister is NOT suitable for dishwashers.

For any further questions please email hello@coffeegator.com.

Replacement valves

The valve in the lid of the canister may become slightly discoloured after 12 months or so. For that reason we have included 4 replacements.

To change the current valve please open your canister lid and press hard where you see the valve. (It's the white papery disk in the middle).

The whole inner disk of the canister should pop out allowing you to take out the old valve. After you've put a new valve in, put the inner disk back and push it down so it clicks into place.
