

Lighting FAQs

Looking to buy a light pendant or sconce but uncertain about how to install it at home? Allow us to assist you with our comprehensive lighting guide.

Step 1 Choose your Style

Our Pendants are 'light shades' only. There are no electrical components included.

We suggest reviewing our concise size guide online prior to selecting dimensions or quantities, to ensure it perfectly suits your space.

Our light pendant styles have a wire frame that will hold the electrical lead component and lightbulb safely and securely.

Global standard sizing

Step 2 Power Off

IMPORTANT:

Ensure that your main power supply is turned off before starting any installation, and always seek advice from a professional.

Step 3 Professional Advice

We suggest asking an electrician or professional advisor to choose your electrical components. This is a pendant light fitting that comes in any length, colour and style to suit your space.

If you have this in your home already, you can skip to the next step.

Step 4 Installation

Unscrew the first ring around
the lightbulb holder.

Sit the electrical component into
the wire frame hole and fasten
back on the ring.

Step 5 Light Bulb

Check the Electrical
Component to see what type
of bulb is needed.

Screw in bulb slowly and
securely.

Step 6 Finishing Touches

Adjust electrical component lead to desired height and turn main power back on to safely test your installation.

Enjoy your new lighting

Relax and take pleasure in your new lighting, which will add warmth and a sense of completeness to any space, making it feel like home.

Pendant Installation

A large, white, spiral seashell is mounted on a light-colored, textured wall. To the left of the shell, a dried palm frond is partially visible. The background shows a blurred outdoor area with a swimming pool and some greenery.

Installing Sconce Lighting

When it comes to wall sconces and wall hanging lighting, the installation process varies slightly. Please follow these steps to ensure a safe and secure installation.

Step 1 Plan your positioning

Choose the location for the wall sconce, ideally where it is easily accessible for wiring.

Mark the spot where you want the sconce to be installed. Ensure that the wiring can reach the sconce.

Step 2 *Attaching to the wall*

Drill holes for wall plugs at marked locations, insert plugs, attach screws slightly protruding, and hang the sconce securely; then attach the light fitting to the wall, ensuring the base sits flush.

Step 3 *Wiring and Mounting*

First, turn off the power at the circuit breaker. Feed the wiring through the hole from the light fitting to the power supply, and connect the wires following Australian electrical standards. Ensure all connections are tight and secure, and cover them with electrical tape if necessary for insulation. Slide the ceramic sconce over the light fitting, aligning the mounting hole with the screws on the wall. Use a spirit level to make sure the sconce is straight, then tighten the screws to secure it, being careful not to overtighten and damage the ceramic. Finally, screw in a light bulb suitable for the fixture and wattage, ensuring it fits comfortably within the sconce space.

Step 4 *Finishing Touches*

Turn the electricity back on and test the light to ensure everything is working. Now, enjoy your wall sconces. Please always consult a licensed professional if you are unsure about the installation process.
