

The iVend eCommerce module is a feature rich eCommerce and mCommerce platform that allows retailers to easily launch new sales channels in different countries or replace existing eCommerce engines with advanced functionality and a better customer experience.

It's seamless integration with the rest of the iVend Retail suite and ability to interface to almost any merchandise management or ERP system means that iVend eCommerce can operate in virtually all environments. This level of integration means that the consumers' experience of the brand is the same in whichever channels they choose to shop. This solves a major problem for many retailers today.

The advanced functionality of iVend eCommerce includes many features that will increase sales to a retailer's existing customer base and many of these features are listed on the next page.

If you are expanding globally, iVend eCommerce provides a much lower risk and lower cost way to determine whether a new country offers a market opportunity that you can exploit, compared to opening stores in that country. Different country web sites or different brand web sites can share a common database (and a common stock file). Different sites can be in different languages.

iVend Retail is used by retailers in 46 countries so all of the main payment gateways have already been integrated with iVend eCommerce. The system design makes it easy to add others as necessary. Intelligent fulfilment rules set up in iVend Enterprise, coupled with the iVend Retail single stock file, ensures that customer orders are fulfilled as economically as possible based on your own rules and business preferences, subject to a complete view of inventory availability.

iVend eCommerce can also be used by brand owners and manufacturers to start selling direct to consumers.

Benefits

- Advanced functionality to help retailers increase sales
- Completely integrated solution for omnichannel retailers, providing a consistent customer experience across all channels
- All channels operate off a common stock pool. This maximizes stock productivity, product availability to the consumer, sales and customer satisfaction
- Accepts a wide variety of payment options including loyalty points, cash on delivery, store credit, gift cards, coupons and digital passes
- Product features designed to maximize the impact of search engine optimization
- Allows retailers to fulfil individual orders from the optimum location according to retailer defined rules. This improves profitability and customer service
- Fashion retailers can post potential new designs in a secure area of the web site and, using the eCommerce user polls capability, can ask the more valued customers in the iVend Loyalty database to vote on designs they would like to see go into production

Customer Services and Sales

- Fast comprehensive product search
- Manage the product/category/department/brand's name and description in multi-language

- Marks transactions and orders as potentially fraudulent for follow up
- Bans fraudulent users from site

Search Engine Optimization (SEO)

- URL rewrite rules so you can easily format your company's URLs the way you want them to look
- Every product, category, and department page can have their own custom search engine meta tags (title, keywords, description, no script blocks, etc.)
- Google XML site maps supported – this a direct Google search engine submission method sanctioned by Google
- Site Map (optimized for search engines)
- Google analytics site metrics and e-commerce tracking compatible
- Search engine meta-tags
- Second tree-form dynamic site map (optimized for users)

Customer Engagement

- Exit offers can be made to customers abandoning their carts to tempt them to complete their purchase
- Image hotspots can be created in an image displaying various products. A hot spot if clicked describes the product in detail and can be added directly into the shopping cart.
- Today's Offer section can be created to attract shoppers on specific days like Black Friday, Independence Day, etc. to display products on special deals on that day
- Coupon Code Offer at Home Page allows filtering of all the products to for which the coupon can be redeemed.
- Products can be marked as loyalty redeemable. A Point-Price slider shows the required loyalty points or/and additional amount that needs to be paid in order to buy a specific product.
- Products can be marked for preordering before they are launched in the market.
- Redeem loyalty points accumulated in brick and mortar stores and vice-versa. Loyalty points intimation is distributed via iVend Passes or SMS notifications.
- Allows displaying the prices in the shopper's local currency if the site is configured to display the prices in two different currencies
