

Installation: Pivot-EZ RHINO w/Clear Tube

Installer: My Vann

Unit: 2011 Carri-lite CL36XTRMS

Bryan,

I went ahead and added an 1 ½" to the brace and was glad that I did. I also had to cut the mounting bracket and extension off to get it up high enough. No big deal there. Overall very happy with the installation. My only negative comment is the painter didn't do a very good job (one side of the support mounting bracket was not painted) and the welds could look a little better. I know I'm being pickey there.

No extra charge for mounting it with the logo on the outside ☺

Thanks

My Vann

My

Thanks for the comments. I have hired a new welder who is making his first parts now. He welds 50 hours per week and is very good. I can't fire the painter.... because that was me. I'm usually much more thorough than to miss that. I got so far behind that I spend 6 consecutive nights until 11:30 and I'm sure that was one of those late night paint jobs. I will definitely improve from this point forward.

If you would send me a couple of pictures of your installation, I would like to post them on my website. Would you mind?

Thanks for your input.

Bryan
