

Angle Box

Designed by Vicky Mihara Avery 2009 - Diagrammed by Chila Caldera 2011

This design is copyright Vicky Mihara Avery 2009. Vicky can be contacted at: www.paper-tree.com. These diagrams are copyright Chila Caldera 2011. Chila can be contacted at: chilagami@hotmail.com. You may copy these diagrams and use them for teaching, sharing, and personal use. You may not sell them, except to cover the cost of copying.

1. Use a square, duo paper if available, inside color facing up. The model needs a relatively heavy-weight paper. Fold in half corner-to-corner, both directions.

2. Bring the bottom raw edge to the middle crease; crease & unfold. Rotate CW and repeat until all four edges are done.

3. Fold the bottom raw edge so that the corner touches the intersection, as shown, dot-to-dot. Crease & unfold. Rotate CW and repeat until all four edges are done.

4. Paper should now look like this. Turn the paper over.

5. Make a new valley fold by bringing the adjacent mountain folds together. One side is shown. Make the new crease from the other side (hold the paper up with one hand and reach to the back with the other hand). Rotate CW and repeat until all four edges are done.

6. Make a new valley fold by bringing the adjacent mountain folds together. One side is shown. Make the new crease from the other side (hold the paper up with one hand and reach to the back with the other hand). Rotate CW and repeat until all four edges are done.

7. Model should now look like this. Turn the model over.

8. Bring the sides of the model up and toward the center, like the sides of a box. Allow the creases to take their natural shape.

9. For the next three steps, one side is shown. Begin to carefully and lightly fold the two most forward flaps to the left and down, as shown

10. Continue lightly bringing the two most forward flaps down toward the "top" of the box

11. Both flaps at the front are now folded around the side of the box and down flat on the top of the box. Rotate CW and repeat steps 9 & 10 until all four sides are flat, as shown in step 12.

12. The completed Angle Box. Use fingernails to sharpen and reinforce the edges. Made from 6" paper, it will hold two Ghirardelli Chocolate Squares.
