

Dräger X-plore® 1380 Particle Filtering Face Piece

The Dräger X-plore® 1380 (N95 mask) is an extremely comfortable, pre-formed mask that provides protection against solid and liquid particles. It is suitable for use in various industrial applications. It can also help reduce inhalation exposure to airborne biological agents such as the avian flu virus, SARS, or other bacterial or viral biological agents.

CoolSafe™ filter material:

The CoolSAFE™ filter material produced from a high-performance filter media combines low breathing resistance. This material exceeds the challenging dolomite dust test requirements.

VarioFLEX™ head harness with EasyStop

This continuous loop head harness is constructed from a robust, tear-proof textile strap. In contrast to other face pieces, no clips are required - preventing uncomfortable pressure and allergic reactions. The head harness can be donned / doffed easily and quickly, and without hair entanglement. It can also be easily adjusted to fit comfortably and securely.

Flexible nose clip

Ensures a great fit at the most critical area.

Nose Seal

Safe sealing at the most critical area: the face piece is equipped with a special nose seal. It is sweat-absorbing, comfortable and most importantly it ensures an effective seal around the nose.

Formed mask body

Proven, ergonomic, stable: The special design and shape of the mask's body offers comfortable and secure fitting to faces with different shapes and sizes. The interior volume ensures wearing comfort along with easy communication. Inside, the mask body is specially reinforced, thus ensuring dimensional stability throughout long period of time.

Hypoallergenic inner layer

This hypoallergenic inner layer is easy on the skin and gives the user added comfort even when used for long period of time.

TECHNICAL DATA

Dräger X-plore® 1380

Filter material	CoolSAFE™ for protection against solid and liquid non-volatile particles
Approvals	Dräger X-plore® 1380 is NIOSH rated for 95 % filtration efficiency against solid and liquid aerosols that do not contain oil (N95). The particulate respirators performance characteristics – e.g. the types and percentage of the particles that they filter – fulfill the National Institute for Occupational Safety and Health (NIOSH) standards set forth a 42 CFR, Part 84.
