

FinishPro™ HVLP 7.0/9.0/9.5

3A4967A
EN

For professional use only. For portable spray applications of fine finish coatings. Not approved for use in explosive atmospheres or hazardous locations.

FinishPro HVLP 7.0/9.0 Standard
FinishPro HVLP 7.0/9.0/9.5 ProContractor
FinishPro HVLP 9.5 ProComp
See page 3 for additional model information

10 psi (0.07 MPa, 0.7 bar) Maximum Working Pressure
ProComp Models: 50 psi (0.35MPa, 3.5 bar) Maximum Fluid Working Pressure

Important Safety Instructions

Read all warnings and instructions in this manual and in related manuals.
Be familiar with the controls and the proper usage of the equipment.
Save these instructions.

WARNING

FIRE AND EXPLOSION HAZARD

- The turbine motor generates sparks. Keep sprayer at least 20 feet (6m) from spray area. Use additional hose if necessary.
- Spraying flammable or combustible materials in a factory or fixed location must comply with NFPA 33 and OSHA 1910.94(c) requirements in the USA and with all similar local regulations in other countries.

Models

Key Features

TurboControl - available on all models	- Allows user to adjust sprayer performance to match application needs. - Use at lowest setting that provides desired finish. - Reduces heat buildup and job site noise.
SmartStart - available only on ProContractor and ProComp models	- Sprayer automatically turns off after no spraying activity; trigger gun to re-start sprayer. - Reduces heat buildup and job site noise. - Turn switch to ON if SmartStart is not desired.
FlexLiner System - available on all models	- Allows user to spray gun at any angle without cup adjustment. - Reduces cleaning time with no siphon tube and disposable liner. - Quick change cup connection.

Pressure Relief Procedure

Pressure Relief Procedure

Follow the Pressure Relief Procedure whenever you see this symbol.

The spray gun cup is pressurized. To reduce the risk of splashing from pressurized fluid, always follow the **Pressure Relief Procedure** before removing cup.

1. Turn the ON/OFF switch to **OFF** position.

Standard Models:

ProContractor and ProComp Models:

2. Unplug power cord to disconnect power.
3. Disconnect spray gun from air hose.

If using a FlexLiner System:

4. Disconnect tubing from gun to relieve pressure in the cup.

If using a ProComp remote cup:

5. Turn compressor ON/OFF switch to OFF position.

6. Disconnect air hose from remote cup. Turn out pressure regulator one turn. Wait until pressure is completely relieved before removing cover.

Setup

When unpacking sprayer for the first time or after long term storage, perform setup procedure.

1. Connect air hose to sprayer. Hand tighten.
2. If using a ProComp Model with remote cup:

Connect gun air hose (V) to end of sprayer air hose (M).

NOTICE

For units with a whip hose, do not connect whip hose directly to sprayer. Connect whip hose to gun end .

NOTICE

The SmartStart feature on ProContractor and ProComp models relies on an air tight system. Use components provided with sprayer and Edge II Plus gun. Ensure all hose connections are secure to avoid air leakage.

3. Connect power cord to sprayer power connection.

4. Plug sprayer power cord into grounded outlet.

Fluid and Work Piece Preparation

- Strain fluids before spraying. This includes colors, reducers and hardeners.
- Use a slower drying reducer or thinner to compensate for the faster drying time caused by the warm air of the turbine. Do not over reduce.
- Sprayer performance varies with the viscosity of the material sprayed and the length of the hose. To prevent pressure drop, use hose supplied with sprayer.
- Most material manufacturers provide recommendations for their materials. Follow these recommendations.
- For proper adhesion, ensure surface of work piece is completely clean.

Fluid Set Selection

For best spray performance, select proper fluid set for fluid being sprayed. Reference **Fluid Set Selection Guide** in HVLP Edge II gun manual provided with sprayer. Fluid Set numbers are marked on fluid needles and nozzles.

Startup

Fill FlexLiner System

1. Disconnect gun from FlexLiner System.

2. Loosen ring from cup. Remove cover and ring from cup. Verify FlexLiner remains in cup upon removal of cover and ring.

3. Fill FlexLiner with material to "MAX FILL" line. Clean threads and sealing surfaces of FlexLiner System.

Startup

4. Install cover and ring onto cup. Tighten ring securely.

5. Connect FlexLiner System to gun.

6. Connect air hose to inlet fitting of gun.

7. You are now ready to spray. Reference **Startup**, page 16, and HVLP Edge II gun manual, provided with sprayer, for spraying instructions.

Fill Remote Cup (ProComp Models only)

1. Fill remote cup 3/4 full and install cover.

NOTICE

Only hand-tighten remote cup cover. Excessive tightening may damage cover gasket.

2. Connect clear air hose to compressor outlet and remote cup air inlet.

3. Connect 5 ft (1.5 m) fluid hose to remote cup fluid outlet and gun fluid inlet.

NOTE: Gun must be setup for use with remote cup.

4. Connect air hose (V) to inlet fitting of gun.

NOTICE

If the remote cup is accidentally tipped over or held at too great of an angle, fluid may leak into air regulator and cause damage. Take precautions to avoid this. If fluid gets into regulator, clean immediately.

5. You are now ready to spray. Reference **Startup**, page 16, and HVLP Edge II gun manual, provided with sprayer, for spraying instructions.

Startup

Startup

TurboControl allows for performance adjustment of the sprayer. To reduce over-spray, always start at lowest setting and increase to the minimum setting required to provide the desired finish.

1. Turn TurboControl to lowest setting.

2. Turn ON/OFF switch to **ON** position.

NOTE: ProContractor and ProComp models in SmartStart setting will automatically turn off when not actively spraying. Sprayer will start upon re-triggering of HVLP Edge II Plus gun. Turn switch to ON position if SmartStart is not desired. In ON mode, unit will still shutdown after 3 minutes of non-use. Sprayer will start upon re-triggering of gun.

NOTE: For SmartStart to function, use components provided with sprayer and Edge II Plus gun. For replacement parts, see pages 32-33.

If using FlexLiner System:

3. Point gun into a waste area. Evacuate air from FlexLiner System by holding gun vertically and pull trigger open until a continuous spray pattern is observed.

NOTE: Tilt gun back and forth to help in evacuation of air.

If using remote cup with ProComp Model:

4. Turn pressure regulator to lowest setting.

5. Turn compressor ON/OFF switch to ON position.

How to Spray

The turbine motor generates sparks. These sparks can ignite flammable fumes. • Keep sprayer in a well ventilated area. • Keep sprayer at least 20 feet (6m) from spray area. Use additional hose if necessary.				

Take a few moments prior to spraying and review these simple tips to ensure your spraying project is a success.

Spray Techniques

Use a piece of scrap cardboard to practice spraying techniques before spraying the work piece.

- For Standard and ProContractor models, use TurboControl to adjust pressure.
- For ProComp models using the remote cup, use TurboControl and pressure regulator on remote cup to adjust pressure.
- Always spray with the least amount of pressure required to provide the desired spray pattern and rate of application. Spraying at pressures higher than necessary wastes material and can result in an orange peel finish.
- To adjust spray gun pattern, see HVLP Edge II gun manual provided with sprayer.

- Aim gun straight at surface. Tilting gun to direct spray at angle causes an uneven finish

- Flex wrist to keep gun pointed straight. Fanning gun to direct spray at angle causes uneven finish.

Triggering Gun

Pull trigger after starting stroke. Release trigger before end of strike. Gun must be moving when trigger is pulled and released.

NOTE: To prevent uneven spray pattern, start and end stroke off of work piece surface.

How to Spray

Aiming Gun

Aim center of spray gun at bottom edge of previous stroke, overlapping each stroke by half.

If sprayer does not spray, reference **Troubleshooting**, page 25.

Refilling FlexLiner

1. Perform **Pressure Relief Procedure**, page 10.
2. Reference **Fill FlexLiner System**, page 13.

Refilling Remote Cup

1. Perform **Pressure Relief Procedure**, page 10
2. Reference **Fill Remote Cup (ProComp Models only)**, page 14.

Cleanup

Cleaning your sprayer and gun after every job is important. Proper care and maintenance results in optimal sprayer performance.

Cleaning Filters

Cleaning the filters with flammable solvents may cause the equipment to ignite or explode. Do not use flammable solvents, such as lacquer thinner, to clean the filters.

The sprayer air filters must be clean at all times to provide sufficient air flow to cool the motor and atomize the fluid.

NOTICE

Damage to sprayer can occur if air filters are not cleaned properly.

NOTE: ProContractor and ProComp models have a TurboControl LED indicator. Indicator will blink repeatedly to indicate clogged filter.

1. Perform **Pressure Relief Procedure**, page 10.
2. Unplug power cord from power outlet.

3. Remove turbine and motor air filters.

4. Clean air filters and replace as necessary:
 - Tap filter gently on flat surface, dirty side down.
 - Direct compressed air 30 psi (2 bar, 0.2 MPa) through filter from the clean side to the dirty side.

NOTICE

Damage to filter can occur if more than 100 psi (7 bar, 0.7 MPa) is applied.

- Soak filter for 15 minutes in water and mild detergent. Rinse filter until clean. Air dry.

Cleanup

Cleaning FlexLiner System

NOTICE

Solvents, such as lacquer thinner, can damage parts of the FlexLiner System. Do NOT immerse parts of the FlexLiner System in solvent.

1. Perform **Pressure Relief Procedure**, page 10.
2. Disconnect gun from FlexLiner system.

3. Loosen ring (1) from cup (5). Remove ring (1) and cover (2) from cup. Verify FlexLiner remains in cup upon removal of cover and ring.

4. Return excess fluid to original container. Hold the FlexLiner (4) in place when pouring.

5. It is recommended to dispose of the used FlexLiner (4) and install a new one. If reusing, clean by wiping all excess fluid from FlexLiner (4).

NOTICE

Dispose of FlexLiner, cleaning materials, and unused fluid according to local regulations. Refer to Safety Data Sheet (SDS) of fluids used.

6. Wipe excess fluid from cover (2) and ring (1) of FlexLiner System.

7. Fill the FlexLiner (4) approximately half-full with cleaning fluid (warm water or appropriate solvent).
8. Remove and clean material strainer (3) by flushing with cleaning fluid. Re-install material strainer (3).

9. Install cover (2) and ring (1) onto cup (5).

Cleanup

10. Cover cup fitting (2a) with a rag, shake the entire FlexLiner System for a minimum of ten seconds.

11. Wipe clean and dry all components of FlexLiner System. Properly dispose of cleaning fluid.

Cleaning ProComp Remote Cup

1. Perform **Pressure Relief Procedure**, page 10.
2. Remove cover from remote cup and return excess fluid to original container.

3. Wipe excess fluid from remote cup and cover.
4. Fill remote cup quarter-full with cleaning fluid (warm water or appropriate solvent).
5. Install cover.

6. Cover cup fitting with rag, shake remote cup assembly for a minimum of ten seconds.

7. Wipe clean and dry all components of remote cup. Properly dispose of cleaning fluid.

Cleaning HVLP Edge II Gun

NOTICE

Solvents, such as lacquer thinner, can damage parts of the HVLP Edge II gun. Do NOT immerse parts of the HVLP Edge II gun in solvent.

1. Remove retaining ring and air cap.
2. Trigger the gun and remove fluid nozzle from gun.

NOTE: Edge II Plus guns contain air cap guide and spring held in place by fluid nozzle. Upon removal of fluid nozzle, set aside air cap guide and spring.

NOTICE

Trigger the gun whenever removing or installing the fluid nozzle. This prevents the fluid nozzle and needle seating surfaces from being damaged.

Cleanup

3. Move trigger slide from SPRAY position (A) to NEEDLE REMOVAL position (B).

4. Remove needle from front of gun.

5. Wipe or flush fluid from nozzle and needle. If necessary, clean retaining ring, air cap, air cap guide, and spring.

NOTICE

Do not use metal tools to clean the fluid nozzle or air cap holes as this may scratch them, causing fluid leaks and a distorted spray pattern.

6. Using a squeeze bottle, flush cleaning fluid through the gun. Hold the gun upside down, pull the trigger, and dispense cleaning fluid into the cup connection.

7. Re-install needle and move trigger slide from NEEDLE REMOVAL position (B) to SPRAY position (A).
8. Trigger the gun and install spring, air cap guide, and fluid nozzle. Install air cap and retaining ring.

Troubleshooting

1. Follow **ProComp Models**, page 9, before checking or repairing.
2. Check all possible problems and causes before disassembling the unit.

Problem	Cause	What to Do
Sprayer not starting	No Power	Check electrical outlet for power. Cycle ON/OFF switch. Check that correct power cord is used and plugged in. Check circuit breaker. Push to reset.
	Sprayer automatically shut-off while in SmartStart setting (ProContractor and ProComp models only)	Verify air valve prior to gun is open. Trigger gun.
No fluid delivery	No material	Check cup for material. See Fill FlexLiner System , page 13.
	No cup pressurization	Check for leaks in the FlexLiner System. See "FlexLiner System" section, page 27.
		ProComp: Check for air leaks from the remote cup cover and gasket. Tighten cover if loose. Clean or replace gasket as necessary.
		Check for air flow from male quick-disconnect at ProComp outlet.
		Turn pressure regulator on remote cup clockwise. Look for pressure on gauge. If no pressure, check air line fittings.
		Check hole in remote cup cover at needle valve for blockage or dirt. Clean if necessary.
	Gun tubing clogged	Check for obstructions in gun tubing. Clean or replace gun tubing if necessary.
	Fluid inlet clogged	FlexLiner System: Check for obstructions in material strainer and inlet fitting.
		ProComp: Check if fluid pickup tube in remote cup is loose. Tighten.
		Blow out and clear material hose.
	Trigger pin in UNLOCK position	Check trigger pin location. Must be in SPRAY position.

Troubleshooting

Problem	Cause	What to Do
Poor atomization	Dirty gun	Clean gun. See Cleaning HVLP Edge II Gun , page 23.
	Dirty air filters	Clean turbine and motor air filters. Replace as necessary. See Cleaning Filters , page 19.
	Extension cord too long	Extension cord must be a 3-wire, 12 AWG (2.5mm ²) minimum, 50 ft (15 m) maximum length.
	Air hose too long	Replace with shorter hose, no shorter than 20 ft (6,1 m)
	Leaking air hose connections	Disconnect and securely connect all hose connections.
Circuit breaker trips	Dirty air filters	Clean turbine and motor air filters. Replace as necessary. See Cleaning Filters , page 19.
	Incorrect power supply voltage	Verify power supply voltage is correct for sprayer model.
	High ambient temperature	Move sprayer to cooler area.
	Excessive current draw	Return to authorized service center.
TurboControl LED Indicator blinks	Dirty air filters	Clean turbine and motor air filters. Replace as necessary. See Cleaning Filters , page 19.
Sprayer shutoff while spraying	Circuit breaker	See "Circuit breaker trips" section above.
	Dirty air filters (Blinking TurboControl LED Indicator - ProContractor and ProComp models only)	Clean turbine and motor air filters. Replace as necessary. See Cleaning Filters , page 19.
	SmartStart active (ProContractor and ProComp models only)	Release gun trigger and re-trigger gun. Turn switch to ON position if SmartStart is not desired.
Sprayer does not automatically shut-off while in SmartStart setting (ProContractor and ProComp models only)	Leaking air hose connections	Verify air hose and attached components are those shipped with the sprayer.
		Disconnect air hoses. Verify o-ring is present inside connection fitting at turbine end of hose. If using a whip hose, verify gasket is present inside connection fitting. Securely connect all hose connections.
		Replace with Graco HVLP accessories, if necessary. See pages 34 and 35.
	Gun leaking air	Verify use of Edge II Plus gun. If SmartStart functions when air valve at end of hose is closed, clean gun. See Cleaning HVLP Edge II Gun , page 23. See separate HVLP Edge II Gun manual.

Problem	Cause	What to Do
FlexLiner System:		
FlexLiner does not collapse or collapses slowly	Dirty sealing surfaces	Remove ring, clean sealing surfaces, securely install ring. See Fill FlexLiner System , page 13.
	Incorrect or no air cap installed on gun	Verify Edge II air cap is installed.
	Air cap is loose	Edge II: Verify retaining ring is fully installed.
		Edge II Plus: Verify retaining ring is installed to a position that does not result in a loose air cap.
	Artisan Valve (if installed) is set too low for desired application	Rotate valve clockwise to increase air flow, until the desired flow is achieved.
	Gun tubing	Verify gun tubing is properly connected between the cup and gun.
		Verify gun tubing is not kinked.
	Air leaking from cup	Damaged tubing. Remove damaged section of tubing. Replace tubing as necessary. See separate HVLP Edge II gun manual.
		Damaged connection between cup and air fitting. Verify fitting is fully installed. If necessary, replace FlexLiner System. See separate HVLP Edge II gun manual.
Fluid leaking between cup and ring	Cup filled too full	Verify cup is not filled above "MAX FILL" line.
	Dirty sealing surfaces	Remove ring, clean sealing surfaces, securely install ring. See Fill FlexLiner System , page 13.
Fluid leaking between cup and gun	Loose cup connection	Tighten connection. Use wrench as needed.
	Damaged o-ring on cup connection	Replace o-ring. Apply grease to o-ring to aid in assembly.
Fluid present at bottom of cup	FlexLiner not installed	Install FlexLiner.
	Damaged FlexLiner	Replace FlexLiner.
Pulsing spray pattern	Air not fully evacuated from FlexLiner System.	See step 3 of Startup , page 13.

Wiring Diagrams (ProComp)

The diagram illustrates the wiring for a refrigerator's control system, divided by a vertical barrier wall. Components and their connections are as follows:

- TURBINE:** Connected to BLACK (BK) and WHITE wires.
- THERMISTOR:** Connected to a YELLOW wire.
- SWITCH (5):** Connected to PURPLE, GRAY, and GREEN wires.
- POTENTIOMETER (11):** Connected to a GREEN wire.
- LED (6):** Connected to a RIBBON cable.
- CONTROL BOARD:** Receives inputs from the turbine, thermistor, switch, and potentiometer. It is connected to a BLACK wire and a POTENTIOMETER HARNESS.
- POTENTIOMETER HARNESS:** Connected to the control board and the potentiometer.
- POWER INLET:** Connected to BROWN (1), GREEN/YELLOW (3), and BLUE (2) wires.
- CIRCUIT BREAKER (9):** Connected to BROWN (4) and BROWN (1) wires.
- RIBBON CABLES:** Connect the LED and control board to other components.
- SWITCH (10):** Connected to BROWN (10) and BLACK (F) wires.
- COMPRESSOR (7):** Connected to BLACK (A), BROWN (B), and BLACK (G) wires.
- FAN (13):** Connected to BLACK (F) and BLACK (G) wires.

At the bottom, two photographs show the physical components: a compressor (7) and a fan (13).
