RX SERIES

with  
variable voltage  
technology

TRI colour

The Simple Lighting upgrade  
just got even easier!

# TRI colour

The GK TRI-Colour incorporates all three popular single colours (Blue, White & Green) into one LED light and like its GK Retro counterparts it too operates on variable voltage technology between 12~32V AC.

Retro-Series LED's deliver greater illumination than a 100W halogen light while consuming less than 12watts of energy.
