

THANK YOU FOR CHOOSING RAGO FABRICATION OUR TEAM THANKS YOU FOR YOUR SUPPORT!

FABRICATION EVERY PRODUCT WE MAKE IS MADE IN THE USA AND SUPPORTS A VETERAN OWNED BUSINESS.

Customer service and satisfaction is our top priority (it actually is second to making kick ass products). With that being said, we will do everything we can to make sure the install process goes as smoothly as possible with the least amount of hiccups. At anytime during your install you have a question, please call us at 559-269-1828.

1. Use a plastic pry bar and slowly work your way around the switch panel. There are ten plastic locking clips holding the panel on.

2. Unscrew the 4 small Philips screws holding on the plastic cubby container to the factory switch panel.

Remove 4 screws

3. Center the new three switch panel (with the switches in it) to the face of the stock panel.

4. Mark one hole and drill it out with a 1/4 inch drill bit. Install the plate with one screw inserted into the new hole to prevent hole miss- alignment.

5. Continue your way around the switch panel, drilling out each hole.

6. Install all 4 screws with the supplied locking nuts. **Do not over tighten.** Wire switches and reinstall panel.

Look forward to seeing your install pics. Make sure you email them to us so we can feature you and tag @ragofabrication and hashtag #ragofabrication on social media. Oh and....if you happen to video your install, we will send you a lil "something something" if you email it over.
