POWDER COATING

Polyester powder coating is a surface finish which can be applied to all designs (*) subject to availability. It is sprayed in a solid, powder form after careful pretreatment of the surface. The coating is fused by heat to produce a continuous film and curing of the coating gives its design properties. The result is a high performance finish that delivers exceptional corrosion protection, durability and resistance to yellowing making it suitable for both interior and exterior use. The process is virtually emission free, so is environmentally friendly.

FEATURES

- Typically 60-80 Microns coating thickness
- Excellent corrosion protection
- Superior colour stability
- Tough yet highly flexible

Satin Finish (65% +/-5%): A satin finish is not as reflective as the gloss finish and because of this is less likely to show any surface imperfections. Satin finishes also provide a good surface for cleaning and resisting abrasion. Unless stated otherwise this is the standard finish supplied.

NOTES:

- All colours are supplied in Satin as standard.
- For visual guide only. Due to the nature of the process colours may vary from batch to batch and exact matching cannot be guaranteed.
- RAL is a colour matching system used for colour specification in Europe tailored to the needs of Architects, Designers, and MyVisibleObject. For more information on RAL see here: https://en.wikipedia.org/wiki/RAL_colour_standard
