

**1st Question:**  
Do you need a raising back rest for seated treatments such as reflexology?

**2nd Question:**  
Do you need a lightweight table for mobile work?

**2nd Question:**  
Do you need a lightweight table for mobile work?

Unfortunately, **Lightweight** (under 14kg) full dimension tables with back rests can't be made as the back support mechanism alone weighs 3kg extra. You do however have some very good alternative options....

- Combine your table with a wheeled cart for easy transporting
- Reduce the weight by reducing the size of the table
- Buy a light flat table + a portable back rest bolster
