

Oasis Adjustable Pressure Switch

Thank you for your purchase! The Oasis Adjustable Pressure Switch is a reliable, heavy-duty solution for any air system in need of an adjustable air pressure switch.

Overview

The Oasis Adjustable Pressure Switch allows you to change the operating pressure of your air system by simply making an adjustment to the pressure switch itself. This pressure switch will thread into any ¼” NPT port on your air reservoir.

Do not install the pressure switch on the bottom of the tank!

A flathead screwdriver is needed to adjust the cut on/off on this pressure switch.

Adjusting the On/Off Pressure

Using a flathead screwdriver, turn the set screw on the body of the pressure switch counterclockwise (left) to loosen it. Do not remove all the way.

Hold the pressure switch by the brass base in one hand. Use the other hand to rotate the top portion of the pressure switch (the rough part of the switch towards the top can be used for grip on the body).

- Twist the top portion of the pressure switch clockwise (right) to increase the cut off pressure.
- Twist knob on the pressure switch counter-clockwise (left) to decrease the cut off pressure.
- The pressure switch on/off pressure will always differ by ~40 PSI. 150 PSI turn off pressure is ~110 PSI turn on pressure.
