HANDCRAFTED LEATHER SHOES

Measure Your Child's Foot

1. Make sure your child's heel is lined up properly on the ruler, where it first touches the ground.

2. Mark your child's foot at the biggest toe to see what their measurement is.
3. Add 0.25" of growth room to your measurement for sandals, Mary Janes and flats. Add 0.5" of growth room for boots.
4. Now with your final measurement, look at our size chart and find the closest matching insole.

Mary Jane/ Flat/ Sandal Example

If your child's foot measures 6" on the ruler, add 0.25" for growth room, making it 6.25". This means you'll want a size US 8.

If the final measurement falls between sizes, choose the smaller size. Even with less growth room, the shoes should still last through the season. For sandals and Mary Janes, aim for the closest fit possible.

Boot Example

If your child's foot measures 6" on a ruler, add 0.5" for growth room, making it 6.5". This means you'll want a size US 9.

If the final measurement falls between sizes, choose the bigger size. Boots fit differently from Mary Janes and sandals, allowing for a bit more growth room.

Tip

Our shoes fit true to size when compared to most brands, you should end with a size very similar to (if not the same) as what they are currently wearing.

If this page prints out correctly, this line should measure 9 inches
