

Converting the Chase Harper Helmet Bag #4725 for use as a tail trunk

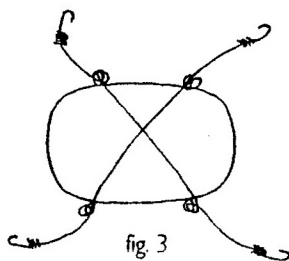

With a minimum level of effort, the Chase Harper Helmet Bag converts to a very useful tail trunk. Obtain 2 18" (or longer if your particular motorcycle seat arrangement requires it) bungee cords and thread each one through an opposing pair of sewn-in loops on the bottom sewn edge of the helmet bag (see fig. 1).

The bungee cords then should return back through the loop before attaching to the motorcycle (see fig. 2 detail). This ensures that

the Helmet Bag will not shift to one side while you are riding.

If the cords you have obtained are too long for your situation, you may take up some slack by mounting in a criss-cross manner (as shown in fig. 3).
