

SHOWER FILTER INSTALLATION INSTRUCTIONS

WHAT'S THIS FOR?

These instructions tell you how to quickly install and start enjoying your new *Aqua Elegante* shower filter. The shower filter installs quickly and easily on any standard ½" threaded connection (the universal size in North America and Europe). For best results, keep water temperature between 40-175°F (or 4-80°C).

TOOLS REQUIRED:

- Teflon Tape (included)
- Wrench (optional)

NOTE:

Your shower filter may look different than in pictures depending on model.

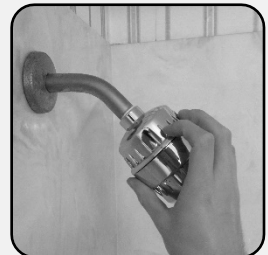

STEP 1: REMOVE EXISTING SHOWER HEAD

Remove the existing shower head from the shower arm by turning counterclockwise. This can usually be done by hand, but you may need a wrench if your old shower head is on too tight. Use your fingers to peel away the old Teflon tape and clean the threaded pipe.

STEP 2: TWIST ON SHOWER FILTER

Wrap the included Teflon tape tightly around the threads of your shower arm. 4-6 full turns around the threads is sufficient to provide coverage. Place the new *Aqua Elegante* shower filter on the shower arm and turn clockwise to tighten by hand.

STEP 3: FLUSH SHOWER FILTER

With just the shower filter installed, turn on the shower water to flush out excess carbon particles. This may turn the water black or grey. Flush for 10 seconds. Turn off the water for a few seconds and flush again. Repeat until the water comes out clear.

STEP 4: TWIST ON SHOWER HEAD

Wrap 4-6 full turns of the included Teflon tape tightly around the threads of your shower filter. Then twist on your shower head and tighten by turning clockwise. If additional tightening is needed, use a soft cloth to protect the finish and tighten with a wrench.

FILTER CARTRIDGE REPLACEMENT INSTRUCTIONS

WHAT'S THIS FOR?

These instructions tell you how to change out the filter cartridge for your *Aqua Elegante* shower filter. Filter cartridges last for about 6 months or 12,000 gallons. You can extend the filter life by “reversing” the cartridge direction once a month (open the filter up and flip the cartridge around).

TOOLS REQUIRED:

- Teflon Tape (included)
- Wrench (optional)

NOTE:

Your shower filter may look different than in pictures depending on model.

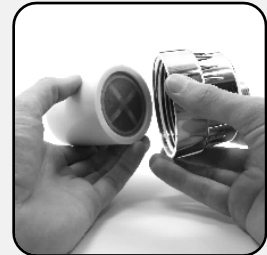

STEP 1: REMOVE SHOWER FILTER

Remove the shower head from the shower filter by turning counterclockwise. Then remove the shower filter from the shower arm by turning the same way. You can usually remove by hand, but you may need a wrench if your shower head or filter is on too tight.

STEP 2: SWAP FILTER CARTRIDGES

Open the shower filter by turning the bottom half counterclockwise until it separates from the top half. Remove the old filter cartridge, and put the new filter cartridge in its place. (The cartridge direction does not matter.) Twist the two filter halves back together.

STEP 3: INSTALL AND FLUSH SHOWER FILTER

Place the shower filter back on the shower arm. Turn on the shower water to flush out excess particles. This may turn the water black or grey. Flush for 10 seconds. Turn off the water for a few seconds and flush again. Repeat until the water comes out clear.

STEP 4: TWIST ON SHOWER HEAD

If needed, wrap more layers of Teflon tape around the threads of your shower filter. Then twist on your shower head and tighten by turning clockwise. If additional tightening is needed, use a soft cloth to protect the finish and tighten with a wrench.
