LightwaveRF plc

(AIM: LWRF)

Launch of Amazon Echo Alexa voice control

LightwaveRF plc (“LightwaveRF” or the “Company”) is the proprietary Internet of Things (IOT) and connected devices platform enabling users to remotely control and monitor light, heat, power and security through just one App. The Company is pleased to announce the launch of Amazon Alexa voice control for the LightwaveRF product range.

LightwaveRF has an extensive range of devices for light, heat and power all controllable with one App. During the last year the Company has made considerable investment in its cloud platform allowing it to integrate with other systems including IFTTT and Google Nest. Through just one App, LightwaveRF can either directly operate its comprehensive range of devices or be enhanced by powerfully linking to other platforms.

Since the UK launch of Amazon Echo and Alexa in late September 2016, LightwaveRF has been working closely with Amazon to achieve voice control of the full LightwaveRF product range. This has been achieved and launched to the LightwaveRF user base today.

Commenting, John Shermer, Founder and CTO said: “We now have a powerful cloud platform that we can easily link with other major connected home brands. The combination of Alexa voice control and LightwaveRF massively improves the user experience for both Amazon Echo and LightwaveRF customers.”
