Tools Required: Power screwdriver.

Note: Please ignore any pre-drilled holes or nut inserts that maybe present in your top(s). They will not match your particular table/desk base and woods screws will be required to be screwed directly into the underside of the top.

Note: It is important to fully tighten all bolts and screws before attaching the top(s) so that the frame is sufficiently rigid. Failure to do this may affect stability once the tops are attached.

Position as presented, and proceed to screw to ensure each corner of the frame.

If this bolt does not drop into the joint use the Allen key to screw it all the way in so that it creates its own thread. This will ensure a nice, tight joint.

For the 2 central legs, attach as presented, using T Beam Bracket.
