How to Make Multi-Wick Candles

Candles made in large containers – such as 3.5" in diameter or more – can be more difficult to wick. For large candles, you might find it works better to double-wick or triple-wick your candle.

Double-wicking a candle is when you use two wicks instead of one. The wicks should be evenly spaced from one another and from the walls of the container.

To choose a wick size, divide the diameter of the container in half. Then use the wick chart to choose a wick size that is appropriate for half the diameter of the jar. For example, a 4" diameter soy wax candle may be suitable wicked with two LX 10 wicks rather than one LX 24 wick.

To make a triple-wick candle, divide the diameter of the container by 3. Use the chart to choose a wick that is appropriate for the new diameter (1/3 of the jar). Just like double-wicked candles, space the wicks an equal distance apart from each other and from the walls of the container.
