## How to change your barograph chart

Metcheck specialise in Barograph charts, pens and ink and often get asked for best practice advice. If you are new to using a Barograph for pressure measurements or have inherited a family heirloom the following steps may help when it comes to changing your charts.

1. Unlock and remove lid from base of barograph carefully avoiding knocking the arm and pen.
2. Twist the brass arm to bring the nib away from the chart. Remove brass cap from the rotating drum.
3. Remove the central screw from the drum.
4. Lift drum away from the base mount of the barograph.
5. Remove centre slide on drum and carefully take off the used chart; set to one side for storage.
6. Wind new chart around drum and replace clip. Please note not all barographs have chart clips, some instruments rely on charts being adhered using double sided tape.
7. Replace and attach the barograph drum complete with a new chart for the week.

Metcheck supply a whole host of Barograph Charts, Pens & Ink. Find supplies for your home barograph at [www.metcheck.co.uk/acatalog/Barogram](http://www.metcheck.co.uk/acatalog/Barogram). Hopefully the above guidelines have been helpful but if you would like further advice or assistance feel free to call or email a member of our sales team.
