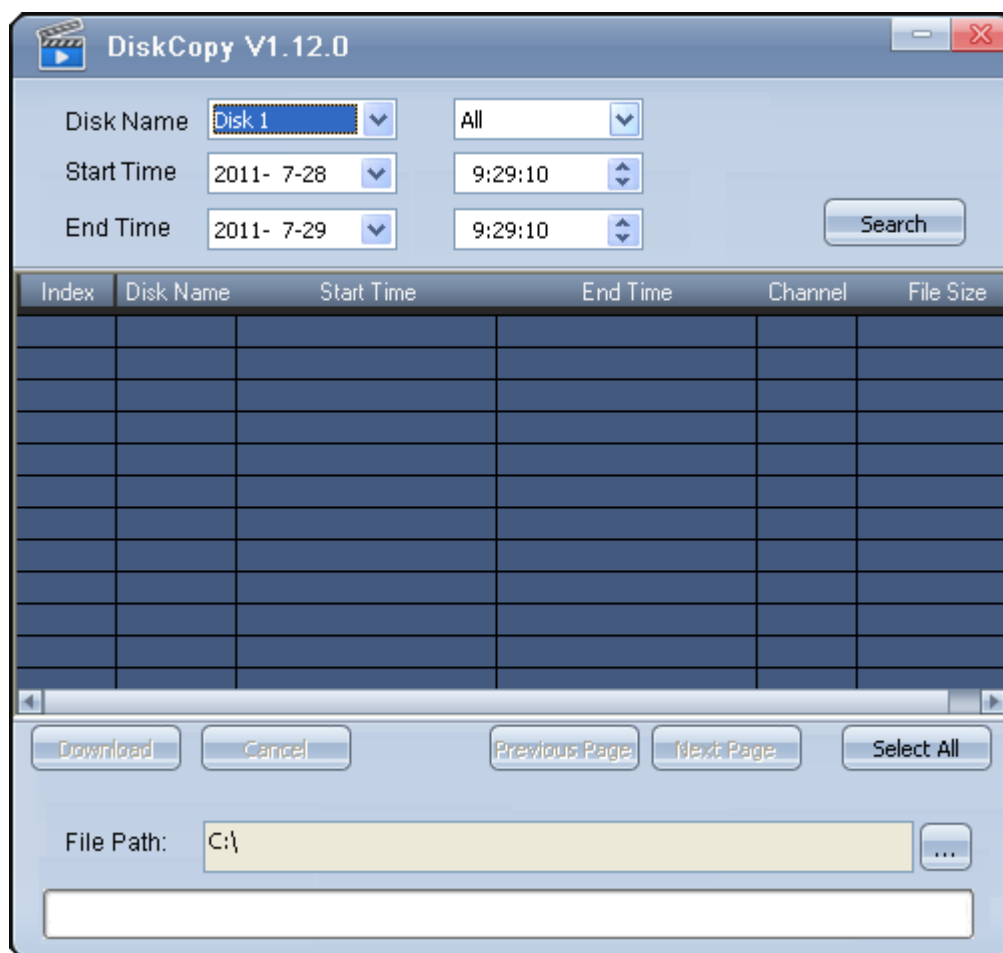

Figure 1

The main interface of the program

3.2 Search recordings

Click "search" to search the designated recordings.

Explanation on the search condition:

- Dropdown list "Disk Name": the designated HDD that to search. Disks are numbered with Disk0, Disk1 …

- Dropdown list All, Channel 01~Channel 16 : all channels, channel1-16

- Start Time and End Time: time that start/finish to search recordings

- Button" Previous Page "and" Next Page": flip

3.3 Download recordings

Tick the recording file that to download before downloading recordings (The button "select ALL" can select all or cancel 'select all' of the recoding files on this page), then click the button "Download" to download the chosen recording(s). There is a progress bar under the program. It will pop up a dialog box after the download to inform that the download has finished. You can click "cancel" to end download during download progress. You can click "…" to re-designate the store directory. The naming format of the downloaded file is "disk number_Partition number\year month date\file name.dav". e.g. "D:\Disk00_Part00\2009-06-05\003\11.01.29-11.01.51[R][@43][0].dav "means that the downloaded file is the file on the first partition of the first disk. The recording time is 2009-06-05 11:01:29 to 2009-06-05 11:01:51. [R][@43][0] is the remark info. that users can simply ignore.
