

NAD+ New Research, New Benefits

Dr. Amanda Wiggins, PhD,
Xtend-Life Chief Research Scientist

NAD+ is even more important than we thought

When we shared [NR6](#), our NAD+ boosting formula, with customers back in the middle of last year, we were inspired by one simple idea:

NAD+ is critical to good health, but levels decline as we get older. Scientists believe that this decline in NAD+ leads to premature aging or death.

We knew NAD+ supplements had strong clinical research pointing to the benefits of energy, cellular health and DNA repair. But we also knew there were plenty of exciting discoveries ahead.

In this newsletter, our Chief Research Scientist, Dr. Amanda Wiggins, walks you through three findings from the latest clinical trials:

- **Immunity** - why scientists are seeing viruses as an "NAD+ battlefield".
- **Weight loss** - a mouse on a high-calorie diet gets fat - no news headlines there. But put a mouse on a high-calorie diet *and* NAD+ and the story gets more interesting.
- **Neurogenerative disease** - Parkinson's and glaucoma are seeing results from NAD+ supplementation.

In good health,

Xtend-Life

New discoveries:

Latest Research on NAD+ Underscores its Broad Benefits

Chief Research Scientist, Dr. Amanda Wiggins shares some exciting discoveries about the benefits of boosting NAD+.
