

VasQFlow

A potent natural nitric oxide booster to support healthy blood flow

Cardiovascular disease is the leading cause of death worldwide.

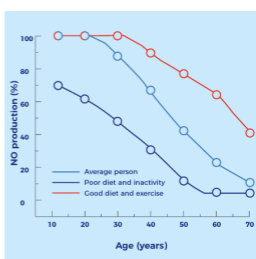

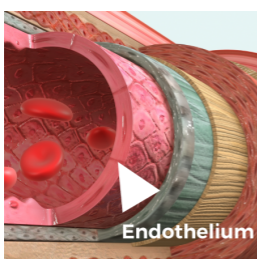

High blood pressure, or hypertension, is one of the most important risk factors for cardiovascular disease, and it can come from any direction - lifestyle, diet or just getting older.

Fortunately, scientists discovered something that can help – Nitric Oxide.

A miracle molecule for high blood pressure

Nitric oxide was proclaimed a "miracle molecule" when its role in blood pressure was discovered by scientists in the 1990s. They called it a *vasodilator*. It relaxes and expands your blood vessels, allowing the easier flow of blood and oxygen throughout the body and organs.

This can improve cardiovascular health by reducing the risk of blood clots, normalising blood pressure, improving immune response, improving mental clarity and delivering a host of other benefits.

Nitric oxide production...

Nitric oxide is produced in our endothelium, a thin membrane that lines our heart and blood vessels. It dilates our blood vessels, potentially reducing blood pressure.

declines with age.

The problem is the ability to produce nitric oxide declines with age. If you're over 30, you're producing significantly less than when you were younger.

VasQFlow – a potent natural Nitric Oxide booster to support healthy blood flow

We've created a brand new product called **VasQFlow** that brings together ingredients with proven abilities to raise nitric oxide levels which can boost the flow of blood and support healthy blood pressure.

The science behind **VasQFlow** checks all the boxes:

- A molecule discovered through Nobel Prize winning research
- Personally validated by our Chief Research Scientist
- Natural ingredients with clinically-backed studies

Quercetin

A natural flavonoid-rich in polyphenols which are packed with antioxidants. It supports the endothelial in producing nitric oxide and has immune system benefits.

Black Garlic Extract

More potent than fresh garlic, it promotes nitric oxide synthase (eNOS) to produce nitric oxide and can inhibit Angiotensin II, which causes tightening of the blood vessels.

Grape Seed Extract

This full-spectrum grape seed extract from New Zealand is very high in polyphenols, especially proanthocyanins. It also promotes nitric oxide synthase (eNOS).

These ingredients are enhanced by a special red spinach extract that delivers several times the concentration of nitrates than beetroot powder. We've also included seven helper ingredients to make the formula even more effective - Vitamin B12, C, D, Riboflavin, Folate, Zinc and Potassium.

The result is **VasQFlow**, a science-backed combination of ingredients with proven efficacy in combating cardiovascular disease by raising nitric oxide levels and reducing blood pressure.
