

1

Make your own attachment

1. Use the provided template to make your own attachment
2. Go to our website or YouTube channel to watch a video
3. Or goto www.bixpy.com/diyrudder for more instructions

2

Attach your creation to the Bixpy adapter (nuts & bolts provided)

3

Attach your Bixpy adapter to your Bixpy Jet

1. Align connector pins
2. Pull nose latch forward to allow metal toe to sit flush
3. Attach power cord (turn 180° and "click" closed)
4. Close rear spring latch

4

Connect your battery

1. Run your power cable to your battery's output connector
2. Attached power cord (turn 180° and "click" closed)
3. Secure battery onto whatever you're powering
4. If you need, extension cords are available at: www.bixpy.com

5

Turn on your system and have fun

1. Use your magnetic kill switch to turn on your system
2. Use your Bixpy remote to run your motor (forward/reverse/stop)
3. Have fun on the water and be safe!

The connector caps on your motor housing and battery wire are there to protect your connectors during storage and transportation. Remove and store them when using the jets in water. Leaving them hanging off the sides will result in their loss. The connector cap on your charging port must be installed tightly at all times when in water.

Motorizing your personal craft may require you to register your craft. Please check your local rules and regulations. Further information at: www.bixpy.com. Always wear a life jacket when on water and carry your paddle/pedal with you at all times. NEVER motor further than you can paddle/pedal back under your own power. Always consider that malfunctions with your equipment can happen and ensure you can get back safely in case of such malfunctions. You MUST read your motor and battery user manual prior to using Bixpy products and agree to all the conditions. Respect others and wildlife at all times - on and off water.
