

1

Attach your Bixpy adapter to your Bixpy Jet

1. Align connector pins
2. Pull nose latch forward to allow metal toe to sit flush
3. Attach power cord (turn 180° and “click” closed)
4. Close rear spring latch

To see a video on how to mate your connectors visit:

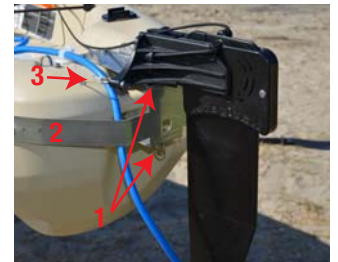

www.bixpy.com/connect

2

Insert the 10mm pin into your kayak's rudder adapter

1. If your kayak is already equipped with a sturdy 10mm rudder holder, you simply need to insert the rudder pin into that opening
2. If you need a gudgeon for your kayak, they are sold separately on our website: www.bixpy.com
3. You can connect the Bixpy Rudder System to your existing steering system or purchase hand or foot steering from www.bixpy.com

3

Connect your battery

1. Run your power cable to your battery output connector
2. Attached power cord (turn 180° and “click” closed)
3. Secure battery on board in a safe and secure manner
4. If you need, extension cords are available at: www.bixpy.com

4

Turn on your system and have fun!

1. Use your magnetic kill switch to turn on your system
2. Use your Bixpy remote to run your motor (forward/reverse/stop)
3. Use your Hobie lever to steer your kayak as normal
4. Lock down your rudder only in rough water or for reverse speeds
5. Have fun on the water and be safe!

Motorizing your personal craft may require you to register your craft. Please check your local rules and regulations. Further information at: www.bixpy.com. Always wear a life jacket when on water and carry your paddle with you at all times. NEVER motor further than you can paddle back under your own power. Always consider that malfunctions with your equipment can happen and ensure you can get back safely in case of such malfunctions. You MUST read your motor and battery user manual prior to using Bixpy products and agree to all the conditions. Respect others and wildlife at all times - on and off water.
