

***Clean for Health***

- Does not bind quat
- Standard rayon and cotton fibers bind quat, leaving it less effective over time
- Quat is the preferred cleaner in healthcare settings, because it is a non-damaging and non-corrosive sanitizer and disinfectant.

**Quat Mop**  
DISINFECTANT APPROVED

Quaternary ammonia is the preferred cleaner of healthcare settings, because it kills bacteria, viruses, and fungi also. Unlike bleach, quat is non-corrosive to metal pipes, and safe on clothing carpets, and fabrics.

Traditional mopheads, such as cotton and rayon blends, will bind the active ingredient in quaternary ammonia, decreasing the parts per million of the disinfectant: leaving it less effective over time.

## Quat Mop Test

1. Prepare your Quaternary Ammonia solution according to instructions, and pour into two jars.
2. Test the solution with litmus paper (it should read 400ppm)
3. Dunk the traditional yarn in the solution, and wring it out. Test the solution with litmus paper.
4. Repeat twice. (notice each time the ppm of the quat solution decreases.)
5. Dunk the quat mop yarn in the other jar of quat solution, and wring it out. Test the litmus paper.
5. repeat twice. (notice each time the ppm of the quat solution remains stable.)

Traditional Blended

Quat Mop

*Comes standard with 5" wide headband.*

*Available in Blue, Green, or White to color code areas, and prevent cross contamination*

*Looped ends have greater durability*

*Tailband provides wide coverage.*
