

FARER

STARK II

MODEL

QUARTZ SUB-DIAL

COMPLICATION

SWISS-MADE RONDA 6004.D

MOVEMENT

One of the most popular watches of our original launch collection. This upgraded model II features 12 times overprinted midnight blue numerals and batons finely outlined in SuperLumi-Nova that sit over a metallic grey sunray, vintage curved dial. The dial finish creates a brilliant lustre when caught in the light, set-off by with the sky blue syringe-style hour/minute hands - infilled with SuperLumi-Nova to glow in the dark. The rich level of detailing continues around the dial with an inset silver machine turned textured sub-dial for seconds highlighted by the pop of coral red line hand.

Designed to be the ultimate classic case for any wrist at a size of 39.5mm diameter, 10mm depth and 20mm lugs. Crafted out of brushed 316L high grade stainless steel with a highly polished back engraved with the Farer compass design. The curved dial is covered by a domed, sapphire-coated glass that gives the watch a beautiful aesthetic, especially when viewing at an angle. Our signature solid bronze tapered crown completes the case details, embossed with the Farer A marque.
