

GIRARD TANKLESS WATER HEATER

GSWH-1M TECH BULLETIN 092813-A

New additional 75 Degree C/167 Degree F Limit Switch

On the Girard GSWH-1M Water Heaters from serial number 1GWHM05682 and higher there is an additional limit switch on the hot water outlet line. This limit switch (75C - 167 degrees F) was added per CSA requirements to ensure flame shut off if the 55C limit switch (ECO) fails to shut off at 55C (131 degrees F).

IDENTIFYING THE LIMIT SWITCHES

75C Limit Switch – White Switch

55C Limit Switch – Black Switch

TESTING THE LIMIT SWITCH

The 75C has a reset button which can be reset if the water temperature exceeds 75C.

During the summer months the warmer incoming water combined with a low water flow (less than 1 GPM) the 75C may limit which will require resetting the switch.

NOTE: Both Limit Switches are replaced when replacing a defective Limit Switch.

Contact Girard Products Technical Support Department for further assistance.
