WINTER USE DEVICE (WUD)

For Girard Products Water Heater Model GSWH-1

INSTALLATION, OPERATION AND MAINTENANCE

ADDENDUM

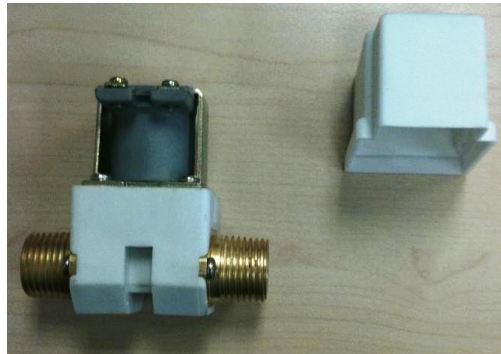

Fig. 1

Installation can be accomplished with two ½" PEX fittings (Sea Tech or applicable fittings) that allow the installation of the Solenoid Valve on the Hot water line near the Water Heater by cutting the ½" PEX tubing and inserting the PEX TEE, then connecting the input of the Solenoid Valve to the Female NPT swivel connector.

The output of the Solenoid valve can then be routed to the fresh water tank (preferred installation), the grey water tank or routed under the vehicle.
