IMPROVES  
UNIFORMITY

**Trimmit**<sup>®</sup>  
Growth regulator

syngenta.

TRIMMIT Growth Regulator reduces hedge regrowth by up to 90%, helping you achieve a better looking, more uniform hedge with less maintenance.

Additionally, TRIMMIT offers:

- Reduction in required labour
- Less green waste for disposal
- Less HSE requirements, eg. traffic control, ladders, trimmers
- Improved drought tolerance
- Deeper, greener colour
- Economical application rates

## HOW TO USE

- Apply TRIMMIT as a root drench for consistent uptake
- Apply the required amount of TRIMMIT in 1 L of water per plant
- Use on plants when they are close to their optimum size i.e. once the desired shape, height, width and foliar density has been achieved
- Use the lower rate when applying for the first time. If increased regulation is required, step up to the higher rate in the second year
- Rates start at 0.5 mL/plant to 2.5 mL/plant

See full label for details.

## MANAGEMENT TIPS

- DO NOT prune the hedging plant for 4 to 6 weeks after application
- Treated hedges should be kept well-watered with adequate nutrition
- Apply a repeat treatment after 12 months only when growth resumes

## IMPORTANT NOTES

- Stress can be caused by a shortage of moisture, high temperature, excess moisture, severe frosts, lack of nutrients, disease and pest pressure and mechanical damage. DO NOT apply to hedges under stress
- Ensure complete coverage of the plant's root system
- DO NOT apply to hydrophobic (water repellent) soil
- May include a soil penetrant/wetting agent
- TRIMMIT will not reduce flowering

“ I have done a number of trials with TRIMMIT on hedging plants and have seen firsthand just how effective this product can be at reducing the growth of hedging species. TRIMMIT reduces the frequency that hedging maintenance is required and thereby reduces the cost of managing the vegetation, a particular benefit for high risk areas such as along busy roads. ”

Dr Sheldon Navie, IVM Group Consultant
