GENERAL INSTRUCTIONS

Brushwet is a highly efficient penetrating surfactant suitable for use with most agricultural chemicals, including herbicides, insecticides, fungicides, miticides and folia micro- nutrients unless otherwise stated. It improves efficiency by enhancing their penetration and uptake. While Brushwet is a highly efficient surfactant, factors such as timing, weather conditions, method of application and/or mixture with chemicals not specifically recommended are beyond the control of the seller. Therefore, the user should carefully observe spray deposits, rate efficiencies, compatibilities and effectiveness in initial applications and adjust the rate of Brushwet accordingly.
