

soilmate™ LIQUI-CAL

What Is Soil Mate Liqui-Cal?

Micronised Liquid Calcium.

Regular use of plant available Calcium is often useful to improve available Calcium during the growing season in Organic Systems. Having the ability to fertigate or even foliar spray a high quality liquid Calcium serves as another method to help improve both the soil structure in the root zone as well as improving quality of produce being grown.

Some Of The Benefits Include:

- Rapid and efficient delivery of Calcium
- Improved cell wall strength & thickness
- Increased uptake of Calcium into the plant in season
- Plant available micronised Calcium source

Calcium aids in the formation and strength of cell walls and is necessary for the development of plants. It is also required for early root growth and strong new top growth.

Micro Fine Mineral Suspensions

Micronised mineral suspensions are now firmly established as a unique nutrient delivery method that opens up a whole new set of options for delivering important minerals to plants for rapid assimilation (uptake) through fertigation.

They provide high analysis, easy to use liquid suspensions of the key nutrients; Calcium, Phosphate, Magnesium, Sulfur and Zinc with an average particle size of 5 micron (5/1000th of 1 mm).

Ground-applied they provide useful microbe food and rapid plant feeding without the leaching problems of soluble fertilisers. They can even be foliar sprayed in some situations.

Total Major Nutrients:

Unit

Calcium (Ca)	% 30.00
Humic Acid	% 4.00

Application Rates

Watered in

20-100 litres per hectare or as advised

Dilution rate

1:20 or as advised

Store in a cool place away from sunlight

Stir well before use

NASAA Organic Certified 3620M.

Our Wild Harvested Seaweed and Abalone Fertilisers are sustainably sourced from Victoria waters. Our Full range of Organic Fertilisers are proudly Australian Made & Owned.
