

Manufacturing Methods

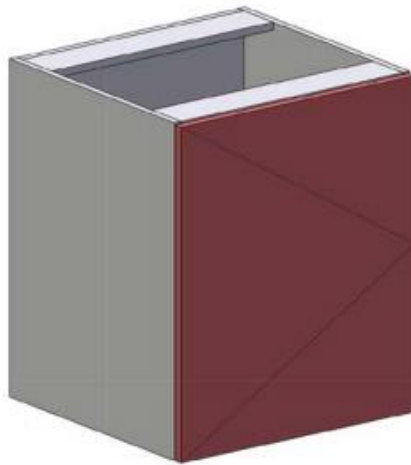

Our Method

Construction methods used when we build the library items are based on common Australian manufacturing techniques.

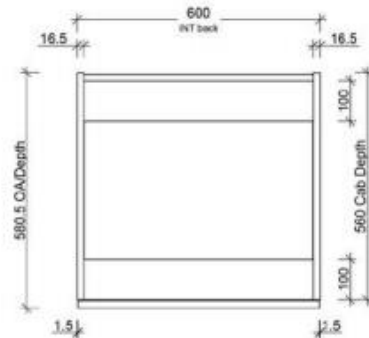

Please check the sample construction drawing below before making a purchase.

Library items are modifiable and you may be able to customize them to suit your construction methods.

We have endeavoured to configure our products to be compatible with most third party software. 3D Analyzer users should take note of the special instruction available in the online product description (where it may be required) to amend naming conventions for compatibility purposes.
