

**i** To find out more about the **i<sup>2</sup> Wireless Nursecall System** call 01793 321 569 for a free, no obligation consultation.

Also available in the **i<sup>2</sup>** range.

**Signal Booster**

This **i<sup>2</sup> Wireless Repeater** increases the range of an **i<sup>2</sup> Wireless Nursecall System** and is useful in larger care homes or those that are spread widely across multiple buildings. Ideally placed in the centre of the home, it will 'repeat' every alarm from the Nursecall System.

**Call Logger**

The **Wireless Nursecall Logger** forms an integral part of the **i<sup>2</sup> Wireless Nursecall System** and provides an electronic record of all Nursecall alarms. Available in USB or network logging formats.

**Periodic Check Unit**

The **Periodic Check Unit** offers a secure and convenient way of improving resident care. When connected to the call point it will automatically initiate an alarm after the pre-set period interval.

**Motion Sensors and Fall Monitors**

Comprehensive range of motion sensors and fall monitors that helps prevent falls or detect seizures.

Wireless Nursecall System

The UK's first professional  
DIY nursecall system.

## A simple approach.

We realise that specifying a nursecall system for your facility can be a challenge. What should it do? What is the best option for your specific requirements? Will the system you choose be compatible with other devices you already have?

At KAM Systems, we listened to our customers and designed a brand new system from the ground up.

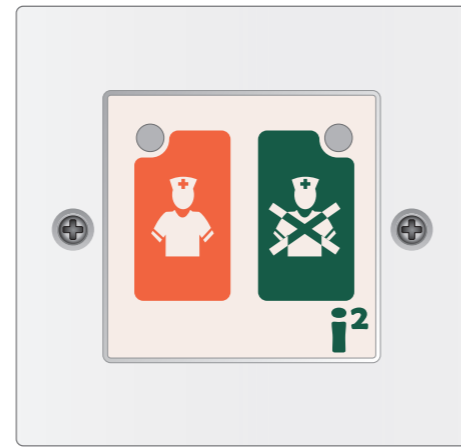

The result is our popular **i<sup>2</sup> Wireless Nursecall System**.

Low cost, easy installation and ease-of-use are key features; made possible by the state-of-the-art technology that lies within.

Just one pager and one call point are all you need to create your system.

Our **i<sup>2</sup> Wireless Nursecall System** has been designed by KAM as a simple to use, reliable and cost effective nursecall solution.

### i<sup>2</sup> Wireless Call Point

The "brains" behind our i<sup>2</sup> system, the wireless call point contains all of the intelligence of a nursecall system in one small package. Meaning there's no need for a central control panel. Designed for wall mounting, the i<sup>2</sup> wireless call point is available with two accessory sockets allowing the connection of a pear push lead and a sensor at the same time.

### i<sup>2</sup> Wireless Nursecall System:

#### Cost effective

Being completely wire-free and with no expensive control panels, i<sup>2</sup> Wireless systems are amongst the most cost effective nursecall solutions available.

#### Easy to install

With virtually zero setup and simple installation, many customers are installing small systems themselves, leading to even greater savings.

#### Reliable

Using proven wireless technology, the i<sup>2</sup> range is quality manufactured and tested to the highest standards and is supported by a 3 year warranty.

### i<sup>2</sup> Wireless Display

Designed for communal areas like a hallway or nurse base, the optional wall mounted display shows which alarm or device has been activated. Clear text messages identify location, alarm urgency and how long the alarm has been active for. Distinct audible alerts make it easy to identify the urgency of the alarm; even the front door bell has a unique sound.

### Personal Pager

Notifies staff members when assistance is required or an alarm is triggered.

### i<sup>2</sup> Door Alarm

Monitoring doors is critical for keeping staff and patients safe. Typically used to monitor fire exit doors, the alarm will activate as soon as the door is opened. It is easily isolated with the use of a magnetic key. This is useful, for example, when a door to the garden needs to be left open in the summer.

### Wireless accessories

The i<sup>2</sup> Wireless Nursecall System is compatible with a variety of wireless or wired accessories, including wrist alarms, alarm pendants, motion sensors, fall sensors and pressure mats.
