

# You and Your Safe-Laser System

## Android

We recommend using the Safe-Laser System in conjunction with Samsung devices. Other devices may work well, but Samsung devices have been fully tested and are easy to use. Also, the instructions below are for use with Samsung devices. Other devices will work similarly, but Settings may be labeled differently and some items may function differently.

If you have any questions or comments, please do not hesitate to call us at (479) 632-4166 or email us at [info@invotek.org](mailto:info@invotek.org) and we will get back to you as soon as possible.

## Navigating your Phone

---

You can navigate your Android phone in two ways. The easiest is to use the arrow keys to highlight what you want and then select **ENTER** to choose the item. Sometimes it is necessary to use the mouse movement keys on your keyboard and then select **CLICK** to choose the item.

In Samsung phones you can also turn on what is called the Side Key Panel (Settings -> Device -> One-Handed Operation -> Side Key Panel) to place the Home, Back, Menu/Running Applications, and/or other buttons on the screen so they are easily accessible.

## Placing a Call

---

### With a Headset:

You can press and hold the button on your Bluetooth headset and use voice commands to place a call.

(If you are having trouble please refer to the headset's instructions)

### Without a Headset:

To place a call, enter into the calling application on your phone and select or type the number into your phone or find the contact you wish to call and then select call. If you wish you may also select speaker using the arrow keys and **ENTER** or the mouse keys and **CLICK**.

## Answering Calls

---

### With a Headset:

To answer a call just activate your headset button.

### Without a Headset:

There are multiple ways to answer your phone. To choose among the ways, go to Settings, select Accessibility, and then Answering/Ending Calls. It tends to be easiest to answer the phone when the lock screen is off, so going into the Display or Security sections in Settings and turning off the lock screen is a great idea. With the lock screen turned off, you can arrow over to and select (using the **ENTER** key) either answer or reject. There are also phone settings to answer using the home key or by voice.

If you have any difficulty doing this, please do not hesitate to call or email us.

## Ending Calls

---

### With a Headset:

Typically to end a call either tap or tap and hold (depending on your headset) the button you use to answer a call.

### Without a Headset:

To end a call select the 'End Call' button on your dialer screen (it is usually red).

# Reject a Call

---

## With a Headset:

To reject a call press and hold down the button on your Bluetooth headset.

## Without a Headset:

There are two ways to reject a call using a keyboard. You can navigate to the 'reject call' button on your screen (usually red) or if the setting to answer and reject by voice is turned on you can say "reject."

# What We Recommend

---

## Phones:

Samsung Galaxy S Series

Samsung Galaxy Note Series

Samsung Galaxy Mega

## Tablets:

Samsung Tabs

Samsung Galaxy Tabs

## Headsets:
