

CYBORG

BY OFFICE 1010

Cyborg's remarkable design derived from a vast study of poor and high-quality chairs. The Cyborg design team recorded an immense amount of data in regard to what makes a long-term chair comfortable, and what causes pain and discomfort.

It seems impossible to please every size, shape and contour of a person. But after countless studies, we start to see that we all have certain similarities. And if all those similarities can be adjusted, it is possible to reach a state of pure perfection, thus the cyborg moto 'Bring Posture to Life.'

Posture is extremely important. Auto manufacturers have studies to create exceptionally comfortable seats in cars that cost us \$100,000, yet we only sit in them for our 20-minute commute. If we are spending the remaining 8 to 12 hours of our day in an office chair, it only seems logical to ensure that we are sitting in the greatest and most comfortable chair ever designed, Cyborg.

We believe the world will be a better place with Cyborg's existence, particularly your workplace. Imagine being part of a company that cared so much about you that they were prepared to make sure that you never have to deal with pain and discomfort at your desk ever again!
