

Fusion Application

Perfect, long lasting, strong nails for everyone

Prep

Thoroughly clean nails with Nail Prep and a wipe. Shape free edges with a 240 grit file. Push back cuticles/proximal nail folds and remove all non-living tissue/skin from the nail plate. Very gently remove the surface shine from nail plate with a 240 grit nail file. Clean nails again with Nail Prep and a wipe.

SCRUB

Remove as much Fusion from the brush as possible and scrub into the nail surface making sure to cover the whole nail. Brush should feel sticky on the nail during this stage and there should be very little Fusion on the nail. Scrubbing ensures perfect adhesion onto the nail surface and provides a protective barrier. *This is the most important stage of applying Fusion.* Remove any traces of gel from the surrounding skin prior to curing. Scrub layer is cured for 60 seconds. Repeat on other hand.

SLIP, SCULPT & SECURE

Working 1 nail at a time starting at the thumb and working through to the little finger, apply a very thin coat of Fusion. Return brush to bottle and pull out a bead of Fusion and sculpt into your preferred shape. Flash cure each nail for 10 seconds and do a full 90 second cure once all of the nails are completed on each hand. Alternate hands when working for maximum speed.

Fusion can be left as it is or colour/nail art can be added. Always finish with top coat.

Infilling & Maintaining Fusion

Wears up to 4 weeks without chipping or lifting

Prep

Thoroughly clean nails with Nail Prep and a wipe. Shape free edges with a 240 grit file. Push back cuticles/proximal nail folds and remove all non-living tissue/skin from the nail plate. Remove existing top coat and colour if used with a 180/240 grit file. Take stress point back to original position. Remove shine from new nail growth with a 240 grit file. Clean nails with Nail Prep and a wipe.

SCRUB

Remove as much Fusion from the brush as possible and scrub into the newly exposed natural nail growth in the cuticle area. Do 1 hand and cure for 60 seconds, repeat on other hand. Brush should feel sticky on the nail during this stage and there should be very little Fusion on the nail. Scrubbing ensures the continuation of perfect adhesion and protection. *This is the most important stage of applying Fusion.* Remove any traces of gel from the surrounding skin prior to curing. Repeat on other hand.

SLIP, SCULPT & SECURE

Start at the thumb and work through to the little finger. Apply a very thin coat of Fusion over the entire nail including existing product. Return brush to bottle and pull out a bead of Fusion, sculpt over the entire nail to create your original preferred shape. Flash cure each nail for 10 seconds and do a full 90 second cure once all of the nails are completed on each hand. Alternate hands when working for maximum speed.

Finish as desired.

Fusion Removal

We don't like to remove and replace unless it's absolutely necessary

Prep

Thoroughly clean nails with Nail Prep and a wipe. Shape free edges with a 240 grit file. Push back cuticles/proximal nail folds and remove all non-living tissue/skin from the nail plate. Using a 180 grit file, file off the bulk of product leaving a thin coating on the nail. Do not allow nail file to touch new nail growth in cuticle area. Clean nails with Nail Prep and a wipe.

Safe Removal

Using a removal pad, saturate with acetone and wrap tightly around the finger. Set timer for 15 minutes. Remove 1 pad at a time and scrape off Fusion. Do not force or file off remaining product. Re-saturate removal pad and apply for another 5 minutes. Continue to do so if necessary until completely removed.

Re-application

Remove shine from new nail growth area ONLY, not the whole nail as that has been treated in previous applications. Apply as directed in original application guidelines.

Fusion is designed to stay on the natural nail for an unlimited length of time. We highly discourage the frequent removal of Fusion as we are always looking to maintain the integrity of the natural nail. Should clients like to change their Fusion colour often (every 4 weeks or less), we recommend using Naked Fusion (clear) to protect the natural nail and then proceeding with a Fusion colour of choice that can be easily changed at each appointment.
