This complies with part 15 of the FCC rules
Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

## Initial Setup - CVX-1300 Converter

The CVX-1300 will support many different input and output formats.
The CVX-1300 replaces the CVX-1200 and many of the standard Cypress CVT series of converters (e.g. CVT-2232 CVT-9102).

## A DIP switch determines which conversion process will be used.

A "Legacy" cross reference chart is provided to quickly determine which settings to use for standard Cypress converter numbers. In most cases several baud rate options are available to expand the capabilities of existing converters. The Legacy cross reference chart will list the converter CVT number and the CVX numbers and the DIP switch setting that will apply. Use the converter numbers to find the DIP switch settings on the CVX-1300 application charts.

Setting up the CVX-1300 converter:

1. First determine which converter (conversion process) is required for the application. This may be one of the standard Cypress converters or one of the new converters that are now part of the CVX-1300 library. All of the different conversion processes are described in detail in this manual. Each process will have a wiring diagram and specification sheet to describe the wiring connections and operation.
2. Set the DIP switch to the setting called out in the CVX application chart.
3. Refer to the wiring diagram for the particular converter that is being used. The wiring diagrams are different depending upon the type of conversion being performed.
4. Connect power to the CVX-1300 board.
5. If the diagnostic indicator LED flashes Green slowly, a valid converter number has been selected. If the diagnostic indicator is illuminated a solid Red color, an invalid DIP switch setting has been made.
6. Connect peripheral devices (Readers, Panel, Switches etc.) according to the appropriate wiring diagram.

LEGACY CONVERTER EXAMPLE: You need a CVT-2232 that operates at 2400 Baud.
The Legacy Compatibility chart calls out CVX numbers 1,2, and 3.
Looking at the CVX application charts for \#1,\#2, and \#3 lists 3 baud rates.
Selecting the 2400 Baud rate for CVX converter \#2 would yield a DIP switch setting of:
1 OFF, 2 ON , 3 OFF, 4 OFF, 5 OFF, 6 OFF, 7 OFF, 8 OFF
The wiring diagram would reference the Wiegand to Serial connections.
NOTE: The CVX-1300 does not use an onboard DB type connector for RS-232 serial signals.
Serial connections can be made directly to the 12 position connector.
An optional patch cord is available with a Female DB-9 connector and flying leads.
The wiring diagrams indicate the equivalent DB-9 connections to the CVX-1300 J3 connector.

## Electrical and Environmental Specifications

The CVX-1300 units should be operated with a filtered 12 Volt nominal DC supply. Any voltage between 8 and 16 volts can be utilized by following the temperature /voltage derating curve. Voltage should not exceed 16 VDC under normal operating conditions.

## External connections and product description

Note: F2F connections support unsupervised mode

Note: Terminals shown for reference.
Connections may or may not be utilized based on converter function.

The Cypress CVX-1300 is based on the CVX-1200 series converter. For most legacy converter functions, the DIP switch settings will be set the same as with the Cypress CVX-1200.

This document provides detailed wiring information and a reference to DIP switch settings for the converter. Detailed conversion descriptions are provided in chapters organized for each type of conversion function. i.e. Wiegand to Serial functions will have a chapter, Serial to Strobed will have a chapter etc. Each chapter is a separate document and is available at www.cypressintegration.com

A Diagnostic LED is provided to provide operational status of the converter:
Diagnostic LED OFF - No power
Diagnostic LED Blinking Green - Unit is operating
Diagnostic LED Red - Undefined DIP Switch Setting

*Note: After CVX-1300 version 3.1.4, settings 94 and 95 were modified. The original unmodified versions currently exist as settings 57 and 58, respectively.

## Standard Wiring Diagrams - CVX-1300 Converter

Wiring diagrams are referenced by function and number. The specific converter descriptions will refer to these diagrams.

LISTING OF STANDARD WIRING DIAGRAMS

1. Wiegand to Serial.
2. Serial to Wiegand
3. Wiegand to Wiegand
4. Strobed to Serial
5. Serial to Strobed
6. Strobed to Wiegand
7. Wiegand to Strobed
8. F/2F to Wiegand
9.Serial to F2F
9. Dallas iButton to Wiegand
10. Serial to Wiegand - Special Application

12 Radionics 1 Wire to Wiegand

Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

## Wiring Diagram \#1 Wiegand to Serial

Reader powered by external supply (8 to 16 VDC)

DB-9 Connections
Direct to PC Com Port

| CVX Terminal | DB9 Pin |
| :--- | :---: |
| Ground | 5 |
| RS232 Input | 3 |
| RS232 Output | 2 |

The Wiegand to RS232 converters support incoming commands to control the Reader LED and Converter Relay.

```
RX Data:
NOTE: Commands must be capitalized characters
    Turn LED on.................@ L 1
    Turn LED off................@ L 0
    Toggle LED..................@ L 2 (Bi-Color LED Turns Orange)
    Turn Relay on...............@ R 1
    Turn Relay off..............@ R 0
```

## Wiring Diagram \#1 Wiegand to Serial

Reader powered by converter +5 VDC

The Wiegand to RS232 converters support incoming commands to control the Reader LED and Converter Relay.

```
RX Data:
NOTE: Commands must be capitalized characters
Turn LED on.................@ L 1
Turn LED off................@ L 0
Toggle LED.................. @ L 2 (Bi-Color LED Turns Orange)
Turn Relay on...............@ R 1
Turn Relay off..............@ R 0
```

## Wiring Diagram \#2 Serial to Wiegand

## Wiring Diagram \#3 Wiegand to Wiegand

Reader powered by external supply (8 to 16 VDC)

Reader powered by 5 Volt Supply

## Wiring Diagram \#4 Strobed to Serial

Reader powered by external supply (8 to 16 VDC)

The Strobed to RS232 converters support incoming commands to control the Reader LED and Converter Relay.

```
RX Data:
NOTE: Commands must be capitalized characters
    Turn LED on................ @ L 1
    Turn LED off...............@ L 0
    Toggle LED..................@ L 2 (Bi-Color LED Turns Orange)
    Turn Relay on.............. @ R 1
    Turn Relay off............. @ R 0
```

## Wiring Diagram \#4 Strobed to Serial

Reader powered by converter +5 VDC

| CVX Terminal | DB9 Pin |
| :--- | :---: |
| Ground | 5 |
| RS232 Input | 3 |
| RS232 Output | 2 |

The Strobed to RS232 converters support incoming commands to control the Reader LED and Converter Relay.

```
RX Data:
NOTE: Commands must be capitalized characters
    Turn LED on.................@ L 1
    Turn LED off................ @ L 0
    Toggle LED.................@ L 2 (Bi-Color LED Turns Orange)
    Turn Relay on...............@ R 1
    Turn Relay off.............. @ R O
```
