

Add-On & Replacement Credentials

Functionally Equivalent to HID[®], ProxCard II[®], 26-Bit Credentials

DATA SHEET

1326AKHD

Standard Light Proximity Card

- Wallet friendly - thinner than other comparable proximity cards
- Extremely durable
- Industry standard formats
- Lifetime Warranty

1386AKHD-I (Imageable) Multi Technology Card

- ISO Thin, just 0.031" (0.8 mm)
- Designed for photo ID printing
- Can also print Bar Codes

1346AKHD

Proximity Key Ring Tag

- Smallest Proximity Key Ring Tag Available
- Robust and Durable -Washing Machine Tough
- Lifetime Warranty

All three Keri Proximity Credentials can be used interchangeably, and are available in both "off the shelf" pre-programmed and custom facility code and ID range versions of industry standard 26-Bit Wiegand format. Each is functionally equivalent to HID[®] ProxCard II[®] 26-Bit credentials. Custom card formatting is also available as required for adding credentials to existing applications. For specific 26-bit facility code and ID ranges, customers simply need to provide facility code, and internal/external and start/stop ID numbers.

Keri's **1326AKHD Standard Light Proximity Card** provides maximum read range performance in a package considerably thinner than other "clamshell" proximity cards. It can be easily carried in a wallet or purse or worn on the clothing with a clip or necklace. These cards are extremely durable and convenient. They are manufactured with a vertical hanging slot punch, and they come with a lifetime warranty.

Keri's **1386AKHD-I Multi Technology Card** allows the user to combine several identification technologies in a single credit-card-thin credential. One of the most popular features of the Multi Technology Card is that it can accept a direct print video image, typically a photograph, bar code, and other user graphics, from most industry dye sublimation printers, to create a custom access credential.

Keri's **1346AKHD Proximity Key Ring Tag** provides user convenience in a small, ergonomic, and extremely durable package. The tag is equipped with a brass eyelet for attachment to a key ring that ensures the neck of the tag will not break during the life of the system. Key tags are especially convenient for building entrances where the user still has their car keys in hand.
