

CARE AND MAINTENANCE

TP-V03W (sink only)

Glacier Ice

Glacier Ice (if included) will protect sinks, faucets and shower doors from hard water spots and mineral buildup. This pre-soaked cloth will cover up to 40 sq. feet and is reusable for multiple uses.

Glacier Ice, Faucet and Sink professional sealer kit will not only restore sinks, faucets and shower doors from hard water spots and mineral buildup. It will also protect from future corrosion, oxidation, mold and mildew. Treats up to 100 sq. ft.

Novatto's ceramic vessel sinks are incredibly easy to clean and maintain. To keep your porcelain sink in pristine condition simply wipe down with a soapy sponge or soft cloth, rinse and dry. A ceramic cleaner such as [Glacier Ice](#) or any other non-abrasive ceramic cleaner may be used if grime or minerals build up.

Caution: Do NOT use metal brushes, scouring pads or any abrasive cleaners when cleaning porcelain sinks as this may scratch the ceramic and may discolor or damage the gloss.

Porcelain is made of kaolin, which is a silicate-based mineral found in clay. The clay is sculpted to the required shape and then covered with glaze. After the glaze dries, the piece is fired at extremely high temperatures, triggering a physical reaction, which turns the surface of the sink into the durable, shiny finish known through out the world. Novatto's in-house testing have found the sinks to be very durable and forgiving. Normal items such as toothbrushes, small jewelry, bottles, etc. will not damage a Novatto ceramic sink. Do not allow the ceramic vessel sink to come in contact with steel or other objects which could scratch or damage the sink. Novatto recommends using a professional plumber when installing your ceramic sink.
