KNIFE JIG ALIGNMENT KIT FOR JOINTERS

With the traditional method, the jointer knife is adjusted the same way as the other knife jigs, using a standard knife adjusting gauge the knives can be adjusted to the height required and be even with the other cutterhead knives. This alignment jig has been designed to help users set their Jointer knives quickly and accurately in order to obtain precision cuts.

INSTRUCTIONS:

- 1) Position the jig flat on top of the rear table surface with the magnetic points facing downwards. The four magnetic points (A, B, C and D. See illustration below) will become the alignment level of the knife. The magnetic points of E and F will keep the knife at the same height of A, B, C and D as illustrated below. Lock the knife gib screw in order to hold in position, the height of the knife tip will be equal to the height of the rear table surface.
- 2) Repeat step #1 for all other cutterhead knives.

Capacity: 0" to 12' (0 to 318mm)

- Ex. 4" (102mm)
6" (152mm)
8" (204mm)
10" (255mm)
12" (305mm)
