### TS-630 Pro-Tex Non-slip Additive For Paint

#### New Generation Non-Slip Additive

**Pro-Tex TS-630** is an additive for paint and coating products that creates a textured slip resistant finish to any surface. It is acceptable for use with virtually any floor coating product including epoxy, urethane, acrylic and alkyd and 100% sol-ids products.

Unique because it is a micronized wax substance that is nearly weightless when added to a liquid coating product. Unlike typical aggregate additives it remains nearly weightless greatly improving its suspension in a liquid coating product. Its light weight allows for a much more even finish preventing thick and thin areas on the surface.

Use Pro-Tex to improve slip resistance and add a non-slip texture to any finish. It is acceptable for use with both oil and water based products. It is acceptable for brush and roller-coat. Not a hazardous material. Safe and easy to use.

**SURFACES:** Decks, floors, steps, patios, walkways, laundry rooms, kitchens, basements, pool decks, handrails, bathrooms. Acceptable for use on wood, con-crete, masonry, metal, fiberglass, plastic and drywall.

**DIRECTIONS:** Pour contents of package into liquid coating product and mix thoroughly. Recommended use: 8 ounces will treat one gallon and 40 ounces will treat 5 gallons. No induction time is required. Color is white.

#### **FEATURES:**

Adds a slip resistant texture to paint and coating products. Stays suspended better than silica aggregates.

Prevents thick and thin areas.

Adds a decorative appearance where desired.

Acceptable for brush, roll or spray applications.
