

The logo for 'Centro' is displayed in white text on a dark rectangular background.

# Centro Oven With Stand Installation Instructions

Beware! The Centro oven is very heavy so due care and attention are required. The oven itself weights 950kg. The stand is 100kg and the timber pallet and crate weighs close to 100kg.

1. Remove the protective sleeves around the oven stand and lock the 2 locking wheels. The front of the stand has 2 x 45-degree cross steel cross beams.
2. Unwrap the protective cover around the pizza oven. The oven is 1.48 m wide and weighs about 900kgs. We recommend using a forklift with extenders.
3. Locate the welded steel contact points on the underside of the oven. This is the forklift lifting point. Load the oven from the front and using the 4 upright positioning bars on the top of the stand, guide the oven onto the stand.
4. Unlock the 2 locking wheels and using care, wheel the oven into place. When in place relock the 2 wheels.
5. Ring andy on 0427 734 993 or Chris on 0432 381 000 prior to installing if further instruction is required.
