

SPE Mini Maxx Vent Mount Installation Instructions

NOTE: These instructions are for installation in the LH vent, but the mount also works in the RH Vent.

1. Remove the LH side trim panel

2. Remove the vent by compressing the four tabs on back and pushing it out of the dash.

3. Carefully remove the chrome trim ring by pulling up on the tabs.
NOTE: use caution as the tabs are easily broken by too much force.

4. Remove the louvers from the vent.

5. Install the Mini Maxx Vent Mount in place of the louvers.

6. Install the chrome trim ring

7. Cut away the honeycomb in the back of the vent. Then cut away a small portion of the duct in the dash and feed the Mini Maxx cable up through.

8. Install the vent back into the dash.

9. Connect the cable to the Mini Maxx and carefully slide the unit onto the mount.
