## Hanging Guide

There is a 4 step process:

- 1) Select your track based on **Weight & Purpose**.
- 2) Select which hangers you want based on **Weight, Style & Purpose**.
- 3) Select the hooks.
- 4) Add accessories like connectors and end caps.

### What is the difference between Clip Rail and Clip Rail Max?

**Clip Rail** is designed to go under a cornice

**Clip Rail Max** is designed to go flush with the ceiling where there is **NO** cornice.

### Track Weights:

The **Clip Rail** holds 20kg/ Linear Metre.

The **Clip Rail Max** holds 25kg/ Linear Metre.

The **Clip Rail Light** holds 45kg/ Linear Metre.

This must be considered in conjunction with the weight limits of the hooks and hangers.

Standard Hangers

Cobra Hangers

### Hanger Guide

#### Style:

All hangers are available in Nylon (perlon) and Stainless Steel. Nylon tends to blend into the wall and Stainless Steel is more of an Art Gallery look. We find that the style is more of a personal preference.

#### Purpose:

Both the Standard and the Cobra hangers are available in Nylon and Stainless Steel and are essentially the same thing, with one major difference. That difference is the way they hook into the Rail. The Cobra is the most flexible in the art track system as it hooks into the rail at any point, whereas the Standard has to slide in and across from the end of the rail.

#### Weight:

The weight each hanger can take depends on whether it is nylon or stainless steel. The type of hanger (Standard Vs Cobra) makes no difference. The Stainless Steel hangers can take up to 20kg each and the Nylon can take up to 15kgs each. However, the weight will also depend on the type of Hook you choose and the Track installed. Thus the entire system as a whole (Track + Hangers + Hooks) needs to be considered carefully when choosing your Art Hanging System.

## Hanging Guide

### Hooks:

We have three types of hooks for all your photo and art hanging needs. The choice of hook is dependent on the weight and the hanging cord you have chosen.

#### **Smart Spring**

ONLY compatible with Nylon hangers.

#### **Zipper Hook**

The most popular hook & compatible with all hangers.

#### **Super Security Hook**

Compatible with Stainless Steel Hangers only. The super security is recommended for extra security for expensive artwork and photographs or commercial applications.

It is important to consider the hook weight limit combined with the hanging cord for the total weight limit of the system as a whole. See individual items for specific weight restrictions and limits.
