

The GermBuster™ Sabre produces Far-UV 222nm light that is safe for human exposure. The photons are unable to penetrate the protective layers of our skin and eyes. It is maintenance-free, environmentally friendly, pathogen destruction.

Use the Sterilray GermBuster Sabre to disinfect high-touch surfaces. The sabre will produce a high disinfection level on any surface it is passed over. The GermBuster Sabre can be used in a dual role for surface disinfection and mounted for air disinfection. The GermBuster Sabre is an ideal tool to protect personnel during transport by providing for both continuous air and surface disinfection.

Purposely designed with EMT needs in mind:

- › Utilizes Human Safe Far-UV technology with a 3 year lamp warranty.
- › Instant on/off at full output power, and frequent on/off cycles don't affect lamp life
- › Easy-to-use – Wave the sabre 1-2" above surfaces for 2-5 seconds depending on amount of disinfection required.
- › Dry, Chemical Free – will not destroy interior surfaces, lamps produce no ozone.
- › Powerful air and surface disinfection. Stops airborne virus and bacteria.
- › Disinfect PPE's before removal.
- › Insures that ambulance is disinfected between trips.
- › Portable custom mounts for ambulances but can be moved anywhere.
