

E-Z KARVE

LIGHT WEIGHT & CARVABLE SCULPTING PUTTY

- NO SOLVENTS
- NON-TOXIC
- LIGHTWEIGHT
- CARVEABLE
- SANDABLE
- PAINTABLE
- PIGMENTABLE

***ENVIRONMENTALLY SAFE**

E-Z KARVE is a 100% solids epoxy system specially formulated to a workable 'clay like' consistency for sculpturing and modeling projects. E-Z KARVE will cure into an extremely strong and durable plastic that is easily sanded or shaped. E-Z KARVE can be tinted or painted and will even accept stains. E-Z KARVE bonds well to most surfaces including fiberglass, foams, metal, wood and concrete. E-Z KARVE is solvent free so it won't melt or dissolve foam surfaces. E-Z KARVE was formulated with a proprietary internal reinforcing that yields a very strong yet light weight polymer.

E-Z KARVE is used as a free form sculpturing medium or applied as a textured veneer over other surfaces. E-Z KARVE is ideal for small or intricate detail work where strength and durability are desired. E-Z KARVE can also be used as a patching compound to repair broken or damaged exhibits.

PROPERTIES OF E-Z KARVE

Viscosity	Clay like Putty
Mix Ratio by Volume	1:1
Pot Life/Working time	45 minutes @70°F
Cure Time	4-6 hours
Packaging	2 Pint, 2 Quart, 2 & 10 Gal. Kits

MIXING INSTRUCTIONS

Mix 1 Part A and 1 Part B by volume. Wearing protective gloves, mix the two parts together until streak free and uniform in color.
