

Holding Capacity

How much dirt and particulates the filter will hold before cutting off good air flow. AllergyZone has 60% higher capacity than its leading competitor!

Air Flow

Good air flow to maintain a good air exchange rate. AllergyZone has good air flow, even as it loads!

Filter Quality Triangle™

12
RATING

This filter achieves a Filter Quality Triangle™ (FQT) rating of 12, indicating superior performance in all three crucial areas necessary for healthy air quality. Other leading manufacturers focus only on particle removal efficiency.

Filter Quality Triangle Rating – A higher number is best

Capture of particles that can induce allergy and asthma symptoms.

0 1 2 3 **4**

Dirt held before the filter needs changing.

0 1 2 3 **4**

Air flow through the filter as it gets dirty.

0 1 2 3 **4**

Performance in each important area is determined by independent laboratory testing, per ASHRAE 52.2-2007, which was developed by the American Society of Heating, Refrigerating and Air Conditioning Engineers. The MERV efficiency of this filter may vary between 11 and 12 due to inconsistencies between testing laboratories.
