

FOR IMMEDIATE RELEASE

Asius Technologies President to Give Opening Keynote at Autodesk Accelerate 2016

BOULDER, CO – September 14th, 2016 – Asius Technologies is honored to announce that President and Founder Stephen D. Ambrose has been invited to be the opening keynote speaker at [Accelerate 2016](#), Autodesk's 3rd Annual Product Lifecycle Management (PLM) User Conference, to be held September 15th and 16th in Boston, Massachusetts. Accelerate brings together industry executives, top market analysts, and subject experts to learn, network, and share strategies for solving modern manufacturing challenges. Autodesk makes software for people who make things. Asius Technologies uses Autodesk Fusion 360 & Product Design Suite for the modeling of its patented ADEL™ products and to simulate usage, as well as prepare prototypes for 3-D printing.

Ambrose said, "Without Autodesk's fabulous Fusion software, all of Asius Technologies' innovations which have facilitated ADEL™ hearing advancements to help everything from Beyonce's recent Super Bowl and Grammy performances to restoring AC/DC's singer Brian Johnson's hearing and ultimate return to the stage never would have been possible." He added, "The chance for me to relate just how pivotal their software has been to our company is a truly fun and gratifying opportunity for me."

"We invited Stephen to speak because he is a pioneer and innovator in the field of product development," said Brian Schanen, product manager for Fusion Lifecycle at Autodesk. "Every year we strive to make Accelerate better than the previous year's event in order to inspire, connect and grow the community, and Stephen's personal narrative will help do just that."

About Asius Technologies: Asius Technologies (www.AsiusTechnologies.com) is the developer of earphones that employ a patented second eardrum that absorbs the harmful pressures that cause hearing loss and degrade sound quality. Asius' products are enjoyed the world over by sound engineers, musicians, audiophiles, and anyone who wears earphones for sustained periods in loud environments. Asius Technologies was founded by Stephen Ambrose, the "Father of Personal Audio," who trailblazed the path for the Walkman, iPod, and virtual reality devices by inventing and then commercializing the in-ear monitor. Feeling responsible for the epidemic of hearing loss attributed to personal listening devices, Stephen is now dedicated to developing technology that not only enhances listening, but also preserves and even restores long lost hearing.
