Thank you for purchasing the Model AZ7000G-8/7500G-8 class. Before using your AZ7000G-8/7500G-8 class, please read the instruction manual and understand the contents well. After reading the instruction manual, please keep it in a location where it is easily accessible to the operator.

**Attention**

- This instruction manual is designed mainly for technicians, but it is advisable that also operators read the instructions with mark to use the machine properly.
- The numbers in lower left corners of figures are figure numbers. We use them in texts as needed for your reference.

**Attention**

The description in this instruction manual is subject to change for improvements of the commodity without notice.
1. To ensure safe use
Always observe the following instructions to ensure the safe use of the industrial sewing machines and devices.

1-1 Application and purpose
The sewing machine is designed to improve productivity in the sewing industry and must not be used for other applications and purposes. Do not use this sewing machine until it can be confirmed that safety measures for the drive units have been taken.

1-2 Before use
Read all instruction manuals thoroughly before starting the use of this machine and follow them. Also, read the instruction manual for the installed drive unit.

1-3 Working environment
DO NOT WORK IN THE FOLLOWING ENVIRONMENTS:
- Place where atmosphere temperature and humidity give a bad influence the performance of sewing machines.
- Outdoors and place where the sewing machines are exposed to sunlight directly.
- Atmosphere containing dust, corrosive gases or flammable gases.
- Place where voltage fluctuation exceeds ± 10 % of the rated voltage.
- Place where power capacity necessary for the used motor specifications cannot be secured.
- Place where strong electric or magnetic fields are generated such as near large-output high frequency transmitters or high frequency welding machines.

1-4 Unpacking and transportation
(1) Unpack from the top.
(2) Never hold the parts near the needle or threading parts when removing the sewing machine head from the buffer of box.
(3) When carrying the sewing machine head, have an assistant.
(4) Pay attention not to get excessive impact or shock when moving the sewing machine head with a pushcart.

2. Installation and preparation
2-1 Instruction and training
Operators and workers, who supervise, repair or maintain the machine head and machine unit, are required to have the adequate knowledge and operation skills to do the job safely. In order to establish such necessary conditions, it needs for the employer to plan and enforce the safety education and training to those workers.

2-2 Sewing table and motor
(1) Prepare a machine table that has enough strength to withstand the weight of the sewing head and any reaction while operating.
(2) Maintain a comfortable working environment with considering the lighting and the arrangement of sewing machine so that the operators can work smoothly.
(3) When installing the control box and the related parts on the sewing machine, take care about the posture of the worker.
(4) Install the drive unit correctly according to the instruction manual.

2-3 Wiring
(1) Never connect the plug for power supply until assembly is finished.
(2) Fix the connectors securely to the sewing machine head, motor, and electric apparatus.
(3) Do not apply excessive force to the connection cords.
(4) Connect the cords away from the driving parts.
(5) Place the ground wire securely to the designated position on the machine head.

2-4 Before operation
(1) Take care not to attach lubricant, silicone oil, and grease on the eyes or skin.
Keep them away from children.

(2) Be sure to fill or drop lubrication oil before operating the sewing machine. Use the Yamato SF oil as specified.

(3) Never put your hand under the needle or near the moving parts of the machine when turning on power supply switch.

(4) When operating a new sewing machine, make sure the rotating direction of pulley agrees with the rotating-direction mark.

2-5 During operation

(1) Be sure to operate the sewing machine with the safeguards such as belt cover, finger guard, and eye guard.

(2) Never place the finger, hair or objects under the needle or close to the moving parts while operating the sewing machine.

(3) Be sure to turn off the power supply switch when threading or replacing the needles.

(4) Never place your hands close to the knives when operating the sewing machine with the trimming devices.

(5) Be sure to turn off the power supply switch when terminating the sewing work or leaving the sewing machine.

(6) If the sewing machine malfunctions, abnormal sound or smell something unusual while operating, be sure to turn off the power supply switch.

2-6 Removal

(1) Turn off the power supply switch if removed or replaced any parts or during adjustment of sewing machine.

(2) Do not pull the cord when removing the plug. Be sure to hold the plug itself.

(3) A high voltage is applied inside the control box. Turn off the power supply switch and wait more than 5 minutes before opening the cover.

3. Maintenance, inspection, and repair

(1) Follow the instruction manuals for maintenance, inspection, and repair.

(2) Entrust the maintenance, inspection, and repair to specially trained personnel.

(3) Be sure to turn off the power supply switch and make sure the sewing machine and motor completely stop before the maintenance, inspection, and repair. (If using a clutch motor, take care that the motor keeps turning for a while even after turning off the power supply switch.)

(4) Do not modify the sewing machine by the customer's judgment.

(5) Be sure to use original replacement parts for repairs or maintenance.

4. Caution signs and alert pictorial markings

This instruction manual contains the following caution signs and alert pictorial markings to prevent you from injuring yourself or the sewing machine from being damaged.

Please follow the instructions.

4-1 Meanings of caution signs

WARNING indicates potentially hazardous situations which, if not heeded, could result in death or serious injury to you and others.

Caution indicates hazardous situations which, if not heeded, may result in minor or moderate injury to you and others, or may result in machine damage.

NOTE is used to emphasize essential information.
4-2 Alert pictorial markings

This mark indicates the warning which, if not heeded, could result in death or Serious injury.

This mark indicates the caution for high temperature.

This mark indicates the warning which, if not heeded, could result in death or Serious injury.

High-voltage applies in the control box. This label indicates that electric shock may be caused.

Steping motor and solenoid may overheat if used continuously. To prevent a burn, take care not to touch.

If not connected earth line, static electricity may be generated and inflict injury on person. In addition, the malfunction of electric system may cause injury to person.

5. Warning labels on sewing machines

This label indicates that removal of the safeguards and works except for sewing performance while the power supply switch is on are prohibited. (For details, see the next page.)

Check the rotating direction of machine pulley agrees with 'ROTATING-DIRECTION SYMBOL'.
6. Handling the machine

When handling the machine, do not carry the cloth plate cover.
1. Name of each part

- Oil cap
- Presser foot release lever
- Cloth plate
- Thread tension spring cap
- SP device
- Eye guard
- Front cover
- Finger guard
- Oil reservoir
- Screw for draining oil
- Presser foot

Fig. 1
2. Installation

2.1 Semi-submerged type

2.1.1 Table cutting diagram

Refer to the instruction manual of the motor for dimensions A, B, C, and D.

Fig. 2
AZ7000G-8-AZ7500G-8
2.1.2 Installation

Install a machine correctly referring to Fig. 3 and 4.

Fig. 3

Fig. 4

Table 1  The number of spacers (1) and (2)

<table>
<thead>
<tr>
<th>Thickness of table</th>
<th>pcs. of (1)</th>
<th>pcs. of (2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>40mm</td>
<td>4</td>
<td>4</td>
</tr>
<tr>
<td>45mm</td>
<td>4</td>
<td>not necessary</td>
</tr>
</tbody>
</table>

Size of spacers: (1) = 15 mm  (2) = 5 mm
2.2 Fully-submerged type

2.2.1 Table cutting diagram

Refer to the instruction manual of the motor for dimensions A, B, C, and D.

Table dimensions 1200 × 540 × 40

Fig. 5
AZ7000G-8-AZ7500G-8
Cutting diagram of auxiliary table

Fig. 6
2.2.2 Table cutting diagram for fully-submerged type with a device

To set up the machine with a device, install the device with below dimensions referring to "2.2.1 Table cutting diagram" (Fig. 5 and 6).

AZ7500G-8 class with K1 device

AZ7000G-8 class with K2 device

AZ7000G-8, AZ7500G-8 classes with MT22 device

AZ7000G-8, AZ7500G-8 classes with MU44, 45 device

Using a servomotor

Fig. 7
2.2.3 Installation

Install the machine correctly by referring to Fig. 8 and 9.
Adjust the position of supporting board so that the machine can be set horizontally and the cloth plate can be set on the same height or a little higher than the machine table.
2.3 Motor, belt and pulley

See the instruction manual for the motor to use and install the motor properly.

To install the clutch motor, align the center of the machine pulley with that of the motor pulley when the motor pulley shifts to the left by toeing down the pedal.

NOTE: Table 2 shows the outside diameter of the motor pulley, rpm of the machine, and size of the belt when using the clutch motor of 3-phase, 2-pole, 400W(1/2HP).

The outside diameter on the table shows the nearest size to the calculated values based on the commercial pulleys at intervals of 5 mm.

⚠️ CAUTION ⚠️

Use only those motor pulleys applicable to the machine. If not, the sewing speed will be over maximum and the machine will be damaged.

Servomotor:

Calculate the outside diameter of a motor pulley from the formula as below.

Or see Table 3 to select a proper motor pulley.

Outside diameter of motor pulley = \( \frac{\text{Usual sewing speed}}{\text{Servomotor speed}} \times 48.5 + 5 \text{ mm} \)

<table>
<thead>
<tr>

Table 3
2.4 Hanging belt

**WARNING**
Before hanging belt, ALWAYS turn the motor switch OFF and check that the motor has already stopped.

Use the V-belt of M-type.
(1) Hang the belt ① on the machine pulley ②, and then on the motor pulley ③ while rotating the machine pulley.
(2) Adjust the belt tension so that the belt has 10 — 20 mm slack when its center is pressed with 10 N (1.02 kgf).
(3) Lock the motor with the adjusting bar ④.

![Fig. 11](image1)

2.5 Belt cover

**WARNING**
To prevent you from getting injured and a material from being caught by the belt, be sure to install the belt cover.

(1) Install the auxiliary belt cover ⑤ as shown in the figure.
(2) Install the belt cover ⑥ as shown in the figure.

![Fig. 12](image2)

2.6 Eye guard and finger guard

To ensure safe use, ALWAYS install the eye guard ⑦ and the finger guard ⑧ on the prescribed position during operation.

![Fig. 13](image3)
![Fig. 14](image4)
3. Sewing speed and rotating direction of pulley

Table 4 shows the maximum sewing speed of each model. Run a new machine at 15 - 20% lower rotating speed of its maximum rpm during the first 200 hours (for about one month) so that the machine can offer a long service life in good condition.

The rotating direction of the motor pulley ① and the machine pulley ② is clockwise as shown in the figure.

⚠️ CAUTION ⚠️

If rotating in reverse direction, oil can not be supplied properly, and the machine can be damaged.

<table>
<thead>
<tr>

</tr>
<tr>
<td>AZ7500G-8 class</td>
<td>7000</td>
</tr>
</tbody>
</table>

Table 4
4. Lubrication

4.1 Lubricating oil

Use YAMATO SF OIL No. 28.

⚠️ CAUTION

NEVER add additives to the oil. If added, it can cause the deterioration of the oil and the damage to the machine.

4.2 Lubricating

When using a new machine or a machine which has not been run for a while, supply a few drops of oil to the needle bar ① and the looper bar ② .

Remove the oil cap ③ indicated “OIL-IN” and supply oil to the upper line of the oil sight gauge ④ .

Make sure that the oil splashes from the nozzle inside the oil cap ③ when running the machine. If oil does not splash from the nozzle, see “4.4 Checking and replacing oil filter” on page 12.

⚠️ CAUTION

Too much oil or insufficient oil can cause oil leakage and machine trouble. Be sure to keep the oil level between the lines. Also too much lubrication can cause oil scatter and material stain.
4.3 Changing oil

Period:
When using a new machine, change the lubricating oil after running the machine for 200 hours (for about one month). After that, change the oil once or twice a year.

Procedure:
(1) Remove the belt cover. (See page 9)
(2) Remove V-belt from the motor pulley. (See page 9)
(3) Remove the machine from the machine table.
(4) Set a container under the screw ① to receive the oil.
(5) After removing screw ①, the oil will drain out.

**NOTE**
Be careful not to soil the V-belt and the machine pulley with the oil.

(6) Reset the screw ①.
(7) Change the oil. (See “4.2 Lubrication” on page 11)
(8) Reinstall the machine on the machine table.
(9) Hang the V-belt on the motor pulley and reinstall the belt cover. (See page 9)

4.4 Checking and replacing oil filter

- If the oil filter ② is clogged with dust, lubrication cannot be done properly.
- Remove the oil filter cap ③ and the oil filter ② to check them every six months. If clogged or cracked, clean or replace the oil filter.
- If the oil splashes from the nozzle insufficiently or includes many bubbles even though oil is sufficiently kept, check or replace the oil filter.

**NOTE**
Be careful the oil may spill out from the oil filter ②, when loosening the screw ④.
5. Proper operation

5.1 Needle system

AZ7000G-8 class: DC × 1 (or 81 × 1)
AZ7500G-8 class: DC × 27 (or B27, 1886)

Select a proper needle in size according to the thickness and the type of the material.

5.2 Installing needles

**WARNING**
Before installing the needles, ALWAYS turn the motor switch OFF and check that the motor has already stopped.

(1) Loosen the screw ① with a screw driver. (Fig. 22)
(2) Remove the old needle with a pair of tweezers.
(3) Insert a new needle into the needle clamp ② as far as it will go with facing its scarf to the right back. (Fig. 23 and 24)
(4) Tighten the screw ① with the screw driver.

- Accessories include the screw driver.

**NOTE**
Tighten the screws ① with a tightening torque of 0.6 N·m (6 kgf·cm).

![Fig. 22](image)
![Fig. 23](image)
![Fig. 24](image)
5.3 Adjusting thread tension

Adjust the thread tension with the thread tension spring caps ① - ⑥ according to the type of fabric, the type of thread, seam width, stitch length, and other sewing conditions.

- To tighten the thread tension, turn caps clockwise.
- To loosen the thread tension, turn caps counterclockwise.

<table>

Fig. 26 AZ7520G-8

Fig. 27 AZ7500G-8, AZ7520G-8

Threading

⚠️ WARNING

Before threading, ALWAYS turn the motor switch OFF and check that the motor has already stopped.

Threading correctly by referring to the threading figure which has been attached onto the back of the front cover.

⚠️ CAUTION

Improper threading can cause thread breakage, skip stitch, and uneven stitch.
5.4 Pressure of presser foot

Loosen the lock nut (1) and adjust the pressure of the presser foot by turning the adjusting screw (2).

- To increase the pressure, turn the adjusting screw clockwise.
- To decrease the pressure, turn the adjusting screw counterclockwise.

Keep the pressure as low as possible for stable stitching.

5.5 Releasing presser foot

⚠️ WARNING
Before adjusting, ALWAYS turn the motor switch OFF and check that the motor has already stopped.

Rotate the machine pulley and position the needle at the highest point. Release the presser foot to the left while pressing the presser foot release lever (3).
To set the presser foot, slide and press the presser foot to the right while pressing the presser foot release lever (3). Then, release the lever.

⚠️ WARNING
Make sure that the presser arm (4) gets into the groove of the presser bar (5).
If not, it can cause breakage to parts and injury to person.
5.6 Opening cover

Front cover ①
To open the front cover ①, slide it to the right and tilt toward you.
For closing, stand the cover. The spring tension makes it slide to the left.

Cloth plate ②
To open the cloth plate ②, shift it to the left while pressing the lever ③.
For closing, shift it to the right. Make sure that it has been locked securely.

Fig. 30

5.7 Adjusting differential feed dog

(1) Loosen the lock nut ④.
(2) For gathering sewing, lower the differential feed lever.
(3) For stretching sewing, raise the differential feed lever.

For fine adjustment of the lever ⑤, turn the screw ⑥.

- To lower the lever, turn the screw clockwise.
- To raise the lever, turn the screw counterclockwise.

Differential ratios up to 1:0.6 – 1:2 and 1:1 – 1:3 are available by adjusting internal mechanism.
Table 7 shows the differential ratios and maximum stitch length on each graduation.

Fig. 31

</tbody>
</table>

Table 7
5.8 Adjusting stitch length

**WARNING**
Before adjusting, ALWAYS turn the motor switch OFF and check that the motor has already stopped.

Each graduation on the machine pulley indicates the length (mm) for one stitch.
Actual stitch length may differ from the length on graduation. It may change depending on the application, type, weight of material or the differential ratio.

1. Rotating the pulley while pressing the push button ①. At the point that the push button can go in, press it again strongly.
2. Then align the desired graduation of the pulley with the mark ② on the belt cover.
3. Release the push button ①.

- To make stitch length smaller, turn the pulley in the direction "S".
- To make stitch length greater, turn it in the direction "L".

**CAUTION**
Make sure that push button is released completely and the pulley rotates smoothly.

The stitch length is adjustable 1 - 4 mm.
Table 9 shows the number of stitches per inch (25.4 mm) and 30 mm converted stitch length.

Table 9
5. Proper operation

5.9 SP device and HR device

Use SP device (needle thread oiling) and HR device (needle point cooling) equipped as standard (excluded some models) to prevent thread breakage and skip stitch when running the machine at high speed or using synthetic thread and/or synthetic fabric.

⚠️ CAUTION ⚠️

1. When not using SP device and HR device, remove the felts 3 and 5. If not removed, it may occur irregular condition during sewing.
2. If the silicone oil is stuck to the parts other than SP and HR devices, it can cause the machine trouble. Be sure to wipe it away.

Use dimethyl silicone oil.
Check the oil amount in SP tank 1. If not enough, supply the oil into the hole 2.
Open the oil container plug 4 of HR device and check the oil amount. If not enough, supply the oil.

Fig. 34 SP device

Fig. 35 HR device
5.10 Cleaning the machine

**WARNING**
Before cleaning, ALWAYS turn the motor switch OFF and check that the motor has already stopped.

The sewing machine should be cleaned at the end of every working day.
Grooves of stitch plate and the area around feed dogs should be cleaned once a week.

**CAUTION**
Clogged dust can cause breakage to parts and oil leakage.

Checking at sewing factory
(maintenance by technician)

**Daily maintenance:**
1. Before operating, remove the machine cover and re-thread correctly. Make sure there is no slack. Check that the thread hanger is right above the spool seat discs of the thread stands (the thread stands should be fixed securely).
2. Check the lubricant and silicone oil amount. Supply them if necessary.
3. Check the order of threading.
4. Check the bend of needles, damage to tips, and the setting positions respectively.
5. Check the sharpness of knives.
6. Check the stitches by sewing a test fabric.
   - stitch length, differential feeding
   - adjusting knives and thread tension

**Weekly maintenance:**
1. On weekends, clean the machine carefully after removing the presser foot and the stitch plate.
2. Check the tension of V-belt.
3. Check and supply the lubricating oil.
6. Adjustment of sewing machine

WARNING
Before adjusting, ALWAYS turn the motor switch OFF and check that the motor has stopped.

6.1 Needle thread tension for overlock stitch

To set the standard position of needle thread eyelet①, position the center of the screw ② with the marks ③.

To set the standard position of the needle thread pull-off④, align the portion ⑤ with the eye ⑥ of the needle thread eyelet(right) when the needle thread pull-off④ comes to the extreme front.
Loosen the screw ⑦ to adjust it.

- To loosen the needle thread tension, move the needle thread eyelet and the needle thread pull-off in the direction “L”.
- To tighten the needle thread tension, move them in the direction “T”.

Fig. 37

Fig. 38
6. Adjustments of the sewing machine

6.2 Looper thread tension for overlock stitch

The standard position of each looper thread eyelet:

**Upper looper supplementary thread eyelet ①**
Move it to the extreme left.

**Looper thread eyelet (left) ②**
Position the part A horizontally.

**Upper looper thread eyelet ③**
Move its left end to the mark ④.

**Lower looper thread eyelet ⑤**
Position the center of the width B with the mark ⑥.

**Looper thread pull-off ⑦**
Move its right end to the mark ⑧.

**Upper looper thread pull-off ⑨**
Align the eye of the thread pull-off with the mark ⑩ when the lower looper moves to the extreme right.

**Lower looper thread pull-off ⑪**
Tighten it with the screw at the center of the slot.

- To tighten the thread tension, move each thread eyelet or thread pull-off in the direction “T”.
- To loosen the thread tension, move them in the direction “L”.
6.3 Needle thread tension for double chainstitch

- To set the standard position of the needle thread eyelet(left) (double chain) ③, adjust the needle thread of double chain on ε level with the eyelet(left) ③ when the needle bar is at the highest point. Loosen the screw ④ to adjust it.

- To set the standard position of the needle thread eyelet holder (double chain) ①, position the center of the slot in the center of the screw ②.

- To set the standard position of the needle thread eyelet(right) (double chain) ⑦, align the portion ⑥ with the eye ⑤ at the most front position of the needle thread pull-off⑧ when the needle thread eyelet holder (double chain) and the needle thread pull-off are at the standard position. Loosen the screw ⑨ to adjust it.

- To loosen the needle thread tension, move the needle thread eyelet and the needle thread pull-off in the direction “L”.
- To tighten the needle thread tension, move them in the direction “T”.

Fig. 40
Fig. 41
6.4 Looper thread tension for double chainstitch

- Align the eye of the double chaining looper thread eyelet (3) with the surface (2) of the double chaining looper thread take-up (1) when being a level with the straight line A. Position the thread retaining finger (4) 1 mm above the eye of the looper thread eyelet (3).

- To set the standard position of the double chaining looper thread eyelet (3), position the center of the slot in the center of the screw (5).

- To loosen looper the thread tension, move the looper thread eyelet in the direction “L”.

- To tighten the looper thread tension, move it in the direction “T”.

- At the standard timing of the looper thread take-up, the looper thread take-up starts taking up the looper thread when the needle starts lowering from the highest point.

**NOTE**

Set the thread retaining finger in the center of double looper thread take-ups when tightening the screw of it.

Fig. 42
6. Adjustment of sewing machine

6.5 Width of overedge seam

Before adjusting, set the edge of the upper knife ① 0 - 0.5 mm above the lower knife ②.

To make wide overedge seam:
1. Loosen the screw ③ on the upper knife holder.
2. Tighten the screw ③ securely after moving the holder as desired in the direction “W”.
3. Loosen the screw ④ on the lower knife holder.
4. The lower knife ② touches the upper knife ① closely with its spring.
5. Tighten the screw ④ securely.

To make narrow overedge seam:
1. Loosen the screw ④.
2. Tighten the screw ④ slightly after moving the holder as desired in the direction “N”.
3. Loosen the screw ③.
4. Tighten the screw ③ with applying the upper knife ① to the lower knife ②.
5. Loosen the screw ④.
6. The lower knife ② touches the upper knife ① closely with its spring.
7. Tighten the screw ④ securely.

**NOTE**

1. After changing the width of overedge seam, check the sharpness of the blades. (See “6.6.4 Sharpness of knives”)
2. Use a stitch plate applicable to the width of overedge seam.
   Adjustable range of overedge seam is within ± 0.5 mm based on the value indicated the gauge respectively.
   However, stitch plate of AZ7120G-Y5-8 is an adjustable range 5 - 5.5mm.
3. Dust clogged at the connecting part of the upper knife holder changes the installing angle of the knives. It will make them cut badly. Be sure to clean the parts by loosening the screw ③.
6.6 Upper and lower knives

6.6.1 Height of lower knife

Loosen the screw ② to install the edge of the lower knife① on a level with the top surface of the stitch plate or 0 – 0.3 mm lower than it.

6.6.2 Height of upper knife (flat type)

Loosen the screw ④ to make the engagement between the upper knife③ and the lower knife① to 0.5 – 1.0 mm when the upper knife is at the lowest point.

6.6.3 Height of upper knife (angled type)

Loosen the screw ⑦ and apply the upper knife⑤ to the stopper⑥ fully. It makes the height automatically. Then tighten the screw ⑦ securely.
6. Adjustment of sewing machine

6.6.4 Sharpness of knives

After adjusting the knives and the width of overedge seam, check the sharpness of the blades by setting a thread between the upper and the lower knives while rotating the machine pulley by hand.

6.6.5 Sharpening knives

If the lower knife cuts badly, re-sharpen it. (See Fig. 49)

The upper knife made of super hard alloy is unnecessary to re-sharpen for about one year and normal grinder is not useful for re-sharpening it.
Keep another upper knife for spare.
If needed, contact us directly or the dealer for re-sharpening it.
6.7 Height of feed dogs

To set the standard position, set the tops of the main and differential feed dogs parallel to that of the stitch plate when the tops of the feed dogs are raised and even with that of the stitch plate.

Make the height between the top of the stitch plate and the rear side of the main feed dog ③ to 0.8 mm when the feed dog is at the highest point.

Install the auxiliary feed dog depending on the machine class as below.

AZ7000G-8 class (Refer to Table 10)
Install the auxiliary feed dog⑤ 0.5 mm lower than the main feed dog ③ in the standard.

AZ7500G-8 class (Refer to Table 10)
Install the auxiliary feed dog⑤ even with the main feed dog ③.

Loosen the screws ②, ④, and ⑥ to adjust the differential feed dog①, the main feed dog ③, and the auxiliary feed dog ⑤ respectively.

**NOTE**

1. Be sure to make no difference of installing height between the main feed dog ③ and the differential feed dog ①. If different, it can cause the unstable feeding and feed scratch mark.
2. For sewing heavy weight knitted fabric or the material having uneven thickness parts, adjust differential feed dog ① and main feed dog ③ 1.0 mm higher than standard position respectively.

Difference between main feed dog and auxiliary feed dog

<table>
<thead>
<tr>
<th>Model</th>

<td>0</td>
</tr>
</tbody>
</table>

Table 10
6.8 Tilt of feed dog

Remove the tail cover ① to loosen the screw ②. Move the feed bar block(rear) lid ③ to adjust it.

- To tilt the feed dog forward down, move it up.
- To tilt the feed dog forward up, move it down.

Fig. 53

Fig. 54
6.9 Needles and loopers

Make adjustment by following the steps below:

In case of 2-needle overlock machines and 3-needle safety stitch machines
(1) Height of needle
(2) Installation angle of lower looper
(3) Fix the distance between needle and lower looper, the front-and-rear position of lower looper temporarily
(4) Parallel of needles
(5) Front-and-rear position of upper looper
(6) Distance between needle and upper looper
(7) Front-and-rear position of lower looper
(8) Distance between needle and lower looper
(9) Relation between lower looper and upper looper

In case of 1-needle overlock machines and 2-needle safety stitch machines
(1) Height of needle
(2) Front-and-rear position of upper looper
(3) Distance between needle and upper looper
(4) Installation angle of lower looper
(5) Front-and-rear position of lower looper
(6) Distance between needle and lower looper
(7) Relation between upper looper and lower looper

6.9.1 Height of needle

(1) Loosen the screws ① to remove the logo plate ②. (Fig. 55)
(2) Remove the screw ③.
(3) Rotate the machine pulley to raise the needle bar at the highest point.
(4) Loosen the screw ④ and adjust the needle bar while moving it up and down.

When the needle bar is at the highest point, make the height “N” from the top of the stitch plate to the needle tip in Table 11.

Fig. 55

</tbody>
</table>

Table 11

NOTE

1. Tighten the screw (4) with a tightening torque of 1.5 N·m (15 kgf·cm).
2. Check the parallel setting of the needles for 2-needle machine and 3-needle machine. (See "6.9.4 Front-and-rear position of lower looper")
3. Apply the liquid packing to the thread of the screw when tightening it.

6.9.2 Installing angle of lower looper

The standard installation angle of lower looper (1) is value A in Table 12.
Make adjustment by loosening the screw (2) to make the height difference between the rear and the tip of the lower looper to value B in Table 12. (Fig. 57)

<table>

Table 12

6.9.3 Distance between needle and lower looper

Rotate the machine pulley clockwise and move the lower looper (1) to the extreme left. Make the distance between the lower looper tip and the center of the needle to 3.3 - 3.8 mm. Loosen the screw (3) on the lower looper holder to adjust it.
6.9.4 Front-and-rear position of lower looper

Single needle overlock stitch on AZ7000G-8 and AZ7500G-8 classes:
Loosen the screw ③ to make the clearance between the lower looper tip and the needle to 0 — 0.05 mm.

2-needle overlock stitch on AZ7020G-8 and AZ7520G-8 classes:
(1) Loosen the screw ③ to make the clearance between the lower looper tip and the left needle to 0—0.05 mm while loosening the screw ③.
(2) Make sure that the clearance between the right needle and the lower looper is between 0 — 0.05 mm.

6.9.5 Parallel of needles

Loosen the screw ① and make adjustment by turning the needle clamp slightly. Make the clearance the same as the left needle to 0—0.05 mm when the right needle meets the lower looper.
Also, refer to “6.9.1 Height of needle” on page 29.

NOTE
Tighten the screw ④ after checking the height of needle.
After adjusting the front-and-rear position of the lower looper, be sure to check the distance between the needle and the lower looper and tighten the screw ③ in Fig. 58.
6.9.6 Distance between needle and upper looper

Rotate the machine pulley clockwise and move the upper looper to the extreme left. Make the distance "U" between the upper looper tip and the center of the needle in Table 12.

1. Remove the thread eyelet support, the looper thread eyelet, and the looper holder cover.
2. Loosen the screw of the upper looper bar crank arm to adjust it.

<table>
<thead>
<tr>

<td>AZ7120G-8, AZ7125G-8</td>
<td>5.0 – 5.5</td>
</tr>
</tbody>
</table>

Table 13

⚠️ CAUTION

Apply the liquid packing to the mounting part of the frame when installing the looper holder cover. If not applied, it can cause oil leakage.

6.9.7 Front-and-rear position of upper looper

The thick portion (around eye) of the upper looper closes to the needle when the upper looper moves from the extreme left to the right while rotating the machine pulley clockwise. (On 2-needle machine, it closes to the right needle.)

Loosen the screw to make the clearance between the back side of the upper looper and the needle to 0.05 – 0.1 mm.
6.9.8 Timing between lower looper and upper looper

Make sure that the clearance between the back and forth is 0.05 - 0.1 mm and between the right and left is 0.05 - 0.3 mm when the lower looper① meets the upper looper② while rotating the machine pulley clockwise.

Be sure to let clearances between the above mentioned ranges.

6.10 Needle and double chaining looper

Timing:
To set the height, insert the double chaining looper③ into the looper holder until it touches the bottom of the holder.

Make the distance between the center of the double chaining needle④ and the double chaining looper tip to 2.0-2.2 mm when the double chaining looper③ is at the extreme left. Loosen the screw⑤ to make adjustment.

Tighten the screw⑥ slightly, and make it have an approximately 6° angle to the looper. Adjust the distance so that the looper tip can touch the double chain needle④ slightly.

Front-and-rear position:
Make the looper③ tip pass the back of the needle and keep them as close as possible without touching each other.

Make the needle pass the back of the curved portion of the looper and let them touch each other slightly when the looper moves from the right to the left.
6. Adjustment of sewing machine

6.11 Needle and needle guards for AZ7000G-8 class

6.11.1 Needle and needle guard(rear)

This machine is equipped with the movable needle guard(rear) ① which is interlocked with the lower looper.
The needle guard(rear) ① holds the needle from the rear and protect the lower looper tip when the needle meets the lower looper tip during upward movement process from the lowest point.

Loosen the screw② to make the clearance between the lower looper tip and the needle to 0 - 0.05 mm.

In case of 2-needle machine, make adjustment based on the left needle in the same way as single needle machine.

Fig. 68

6.11.2 Needle and needle guard(front)

Loosen the screw ④ to make the clearance between the needle guard(front) ③ and the needle to 0.02-0.05 mm.

In case of 2-needle machine, make adjustment based on the left needle in the same way as single needle machine.

Fig. 69
6.12 Needle and needle guards for AZ7500G-8 class

6.12.1 Needle and needle guard (rear)

This machine is equipped with the movable needle guard (rear) ① which is interlocked with the lower looper. The needle guard (rear) ① holds the needle from the rear and protecting the lower looper tip when the needle meets the lower looper tip during upward movement process from the lowest point.

Loosen the screw ② to make the clearance between the lower looper tip and the needle to 0 — 0.05 mm.

In case of 3-needle safety stitch machine, make adjustment based on the left needle for the overlock seam’s needles in the same way as 2-needle overlock machine.

Fig. 70

6.12.2 Needle and needle guard (front)

Loosen the screw ④ to make the clearance between the needle and the needle guard (front) ③ to 0.02 — 0.05 mm.

In case of 3-needle safety stitch machine, adjust it based on the left needle for the overlock seam’s needles in the same way as 2-needle overlock machine.

Fig. 71

6.12.3 Needle and needle guards for double chainstitch

**Needle guard (rear) (double chain stitch):**
Loosen the screw ⑥ to make the clearance between the needle and the needle guard (rear) ⑤ to 0 — 0.05 mm at the lowest point of the needle.

**Needle guard (front) (double chain stitch):**
Loosen the screw ⑧ to make the clearance between the needle and the needle guard (front) ⑦ to 0.1 — 0.2 mm.

Fig. 73
6.13 Position of presser foot

Install the bottom surface of the presser foot parallel to the stitch plate when viewing from the front. Slanted presser foot can cause feed scratch mark.

To set front-and-rear position, adjust the clearance between needle drop of the presser foot and that of the stitch plate to 0.2 – 0.3 mm as shown in Fig. 73. Loosen the screw ① to make adjustment.

Fig. 73
7. SC10 device

7.1 Outline
SC10 is a self-cleaning system that can keep a clean and comfortable environment for operators. It eliminates clogged dust around the lower knife holder and under the stitch plate by cutting material during the sewing. And also makes maintenance easily and prevents troubles caused by the lint.

7.2 Adjusting ventilating amount
Select the type of setting by changing the position of the air deflector 1 depending on the sewing speed and sewing condition.

To set the standard position, insert the air deflector 1 into the guides 2 and 3. (See Fig. 75)
For high speed and less dust during sewing, insert the air deflector 1 into the guides 2 and 4. (See Fig. 76)

When not using SC10 device, remove the air deflector 1.
7.3 Installation

7.3.1 Installing air deflector

(1) Drain the oil from the machine.
(2) Tilt the machine backward.
(3) Loosen two screws ④ and remove the wind guide plate ②.
(4) Install the air deflector ③ into the guides ⑤ of the oil reservoir ① securely.
(5) Reinstall the wind guide plate ②.
(6) Raise the machine upright and supply the oil.

7.3.2 Installing blowing hole screen

(1) Install the blowing hole screen ⑥ on the oil reservoir ①.
(2) Install the wind guide plate(front) ⑦ on the oil reservoir ① while pressing the blowing hole screen ⑥ with two screws ⑧.
7.3.3 Installing lint removal pipe

(1) Put two pipe clamps ② to the lint removal pipe ①.
(2) Install the lint removal pipe ① and the pipe clamps ② on the machine frame with two screws ③.
(3) Connect the lint removal pipe ① to the pipe from the lint collecting device.

⚠️ CAUTION ⚠️

Suction will be insufficient if connecting another device to one lint collecting device for SC10. When using ventilation, air pressure should be 0.2 Mpa (2 kgf/cm²) or more.
