

Mazato

INSTRUCTIONS & PARTS LIST
FOR
MODEL DW-1735

1. Specifications

Model: DW - 1735MD / UT16

Name: High Speed, 3 Needle Sewing Machine with Cylindric Bed
for Attaching Elastic at Waist

Dimensions: 480 (L) X 240 (W) X 430 (H) mm.
Circumference of Bed - 440 mm. (when fitted Rear Roller)

Weight: 45 kg.

Stitch Formation: 4 0 7 (ISO)

Use: For attaching a tubular elastic band at the tubular waist
of briefs or the like

Sewing Speed: Up to 5,000 s.p.m. Economical Speed - 4,000 s.p.m.

Stitch Length: 1.4 - 3.6 mm. 7 - 20 stitches per inch
8 - 21 stitches per 30 mm.

Needle Distance: "D" -- 5.6 mm.

Needles to Be Used: UY 128 GAS, #65, 70, 80, 90 (SCHMETZ or ORGAN)

Needle Bar Stroke: 33 mm.

Presser Foot Lifting: 7.0 mm.

Adjustment of
Feeding: By Pushbutton

Differential Ratio: Normal Differential (Maximum) 1.0 : 1.8
Reverse Differential (Maximum) 1.0 : 0.8

Lubricant: YAMATO "SF" OIL or "TERESSO 47"

Lubrication: Automatic feeding by Gear Pump in combination with
splashing

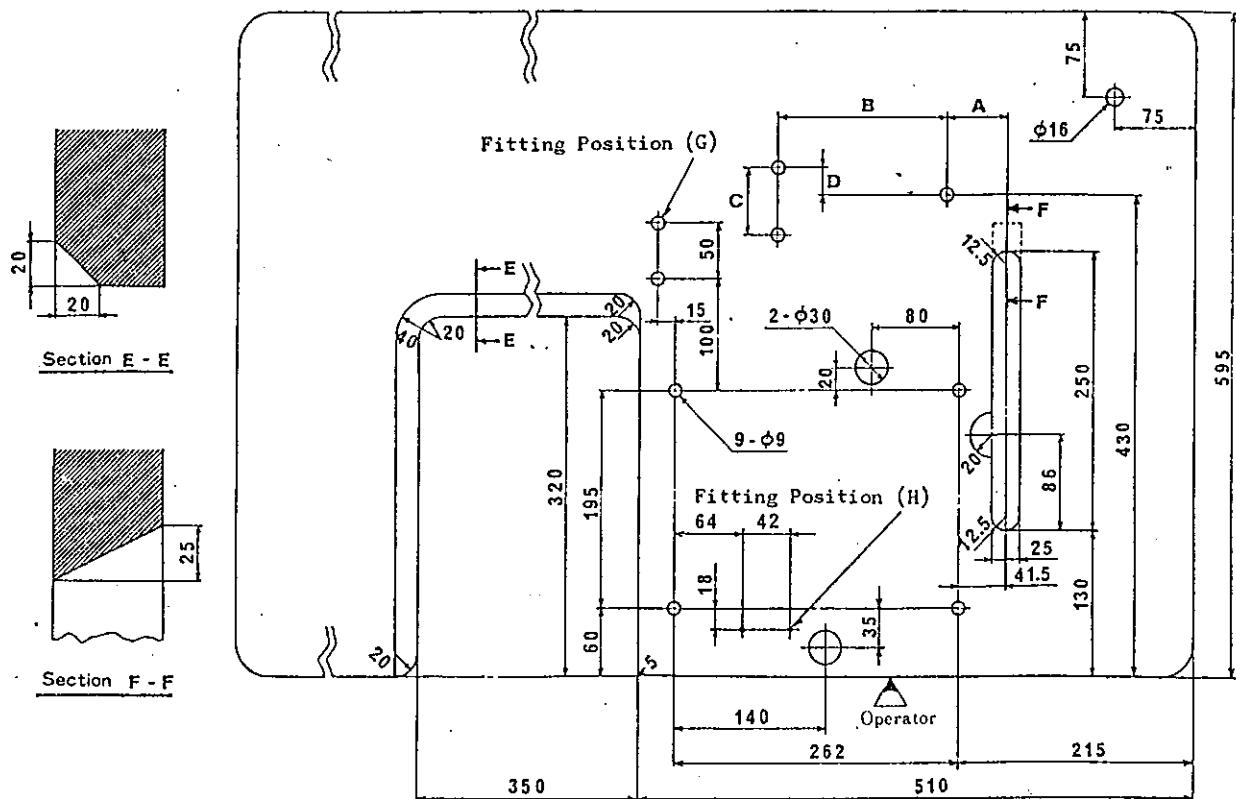

Reservoir: Capacity - 1,100 c.c.

Installation: To be installed on the top face of Table

Fabric Cutting
Device: With Upper Knife Drop Mechanism

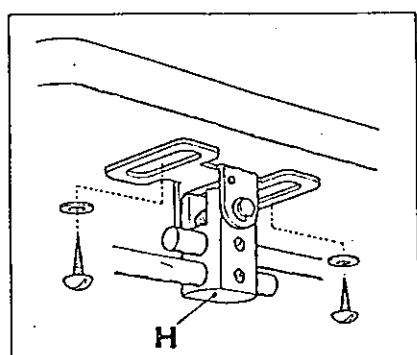

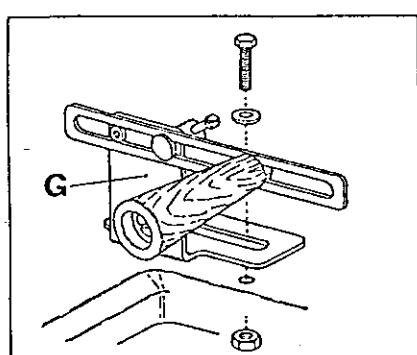

Attachment: UT16 - Automatic Thread Trimmer

2. Cutting Dimensions of Table and Fittings

Tension Roller Holder is fitted to the place shown on the sketch hereabove.

Upper Knife. Drop Knee Lever is fitted to the back of the place shown on the sketch hereabove.

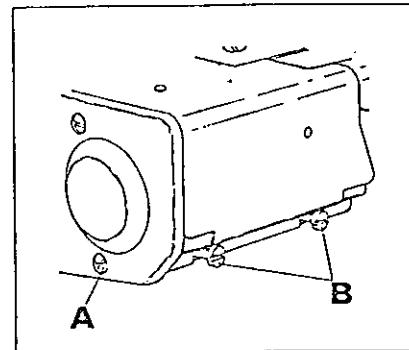

This Lever is necessary
when Upper Knife Drop
Mechanism is used.

3. Removal and Setting of Fabric Cutting Device Basement

Fabric Cutting Device Basement must be removed when Needle Guard (Front), Looper and Differential Feed Dog are adjusted.

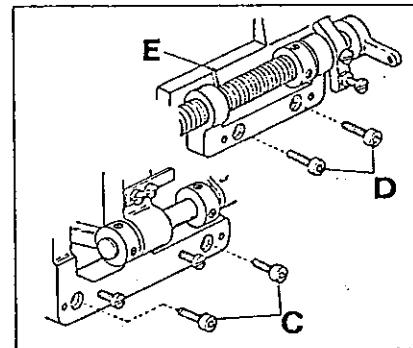

* Removal: -

- 1) Loosen Screw (A) and remove Side Cover.
- 2) Loosen Screw (B) and remove Cylinder Cover.
- 3) Loosen Screws (C) (D) and remove the Basement.

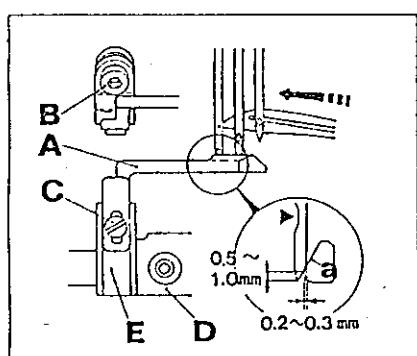

* Setting: -

- 1) Put each Positioning Pin into 4 holes of the Basement, then fix the Basement with Screws (C)(D). At this moment, the End (E) of Cutting Knife Return Spring must be applied to Machine Frame.
- 2) Fit Cylinder Cover and Side Cover with Screws (B) (A) respectively.

4. Relation between Needle and Needle Guard (Front)

When the point of Looper, on its way to left, reaches the center of left needle, Needle Guard (Front) (A) pushes the left needle backwards 0.2 ~ 0.3 mm. but the back face of the needle must not touch the point of Looper.

And, place the portion (a) of the Guard (A) at 0.5 ~ 1.0 mm. upper from the point of needle as shown in the sketch, and fix the Guard (A).

Then, bring back Looper to the right end of right needle and confirm that an allowance exists between the needle and the Guard (A).

The longitudinal adjustment is made by loosening Screw (B) of Needle Guard (Front) Holder, and the height is adjusted by loosening Screw (C) of the Guard. And, the lateral position of the Guard shall be decided by applying Needle Guard (Front) Holder (E) to the left end of Looper Holder Frame (D).

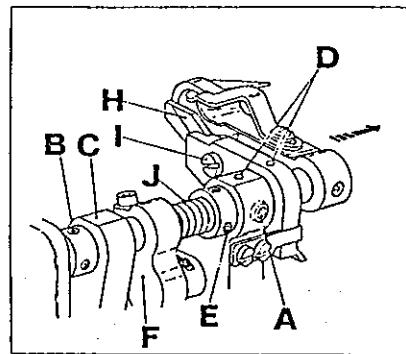

5. Adjustment of Fabric Cutting Device

5 - 1 Cutting Width of Fabric

The cutting width of fabric shall be changed as the following order.

- 1) Open Cylinder Cover, Front Cover and Chip Guard (Lower).
- 2) Loosen Screw (A) of Lower Knife Holder and Screw (B) of Collar (Left).
- 3) Place Lower Knife Holder at the requisite position and tighten Screw (A).
- 4) Apply Collar (Left) to the edge face of Lower Knife Holder Bracket (C) and tighten Screw (B).

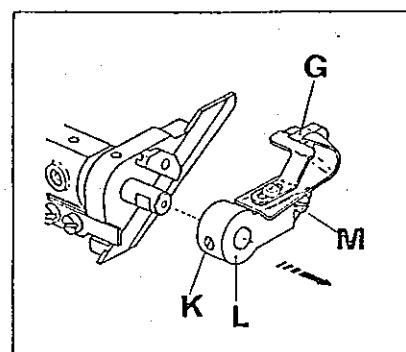

Note: Occasionally, feed a small quantity of oil to Oil Hole (D).

5 - 2 Removal and Setting of Lower Knife

* Removal: -

- 1) Loosen Screw (B) of Collar (Left) and Screw (E) of Collar (Right).
- 2) Push Upper Knife Connection (Upper) (F) to right and provide an allowance between Upper (G) and Lower (H) Knives, then tighten Screw (E) temporarily.
- 3) Loosen Screw (I) of Lower Knife Clamp and pull off Lower Knife (H) downwards.

* Setting: -

- 1) Insert Lower Knife (H) to its Holder and make the Blade even with the top face of Stitch Plate, then tighten Screw (I).
- 2) At this time, Upper and Lower Knives shall be engaged with the pressure of Spring (J) by loosening Screw (E) tightened temporarily. And, apply Collar (Right) to the left edge face of Lower Knife Holder keeping the pressure of Spring (J), and re-tighten Screw (E).
- 3) Put a thread between Upper and Lower Knives and turn Pulley manually to confirm the sharpness of Knives.
- 4) Apply Collar (Left) to the edge face of Lower Knife Holder Bracket (C) and tighten Screw (B).

5 - 3 Removal and Setting of Upper Knife

* Removal: -

- 1) Loosen Screw (K) and remove Upper Knife Holder (L).
- 2) Loosen Screw (M) and remove Upper Knife (G).

(Continued)

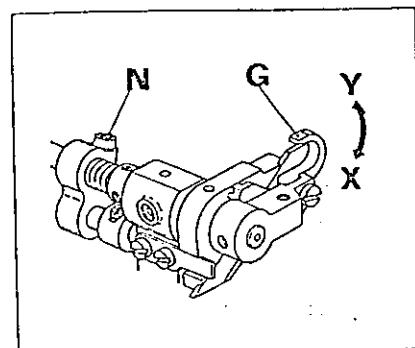

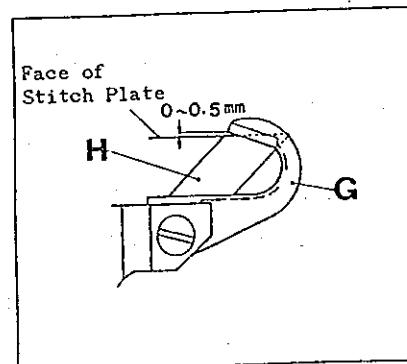

* Setting: -

- 1) Fit Upper Knife (G) to its Holder (L).
- 2) Make the edge face of Upper Knife Holder (L) even with the edge face of Upper Knife Driving Shaft, and tighten Screw (K).
- 3) At this time, Upper and Lower Knives shall be engaged with the pressure of Spring (J) by loosening Screw (E) of Collar (Right). And, apply Collar (Right) to the left edge face of Lower Knife Holder keeping the pressure of Spring (J), and tighten Screw (E).
- 4) Put a thread between Upper and Lower Knives and turn Pulley manually to confirm sharpness of Knives.
- 5) Loosen Screw (B) of Collar (Left) and apply the Collar to the edge face of Lower Knife Holder Bracket (C), then tighten Screw (B).

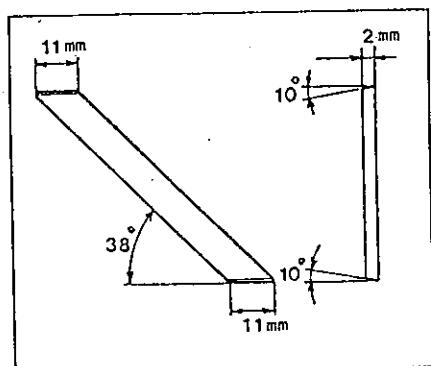

5 - 4 Engagement of Upper and Lower Knives

When Upper Knife comes to its lowest position, the engagement of Knives shall be as shown in the sketch right side.

The engagement is increased when Upper Knife is moved to the direction (X) and decreased by moving the Knife to (Y). This adjustment is made by loosening Screw (N) of Upper Knife Connection (Upper). Re-tighten Screw (N) after adjustment.

5 - 5 Sharpening of Knives

If the sharpness of fabric cutting becomes blunt, re-sharpen Lower Knife first referring to the sketch. In this re-sharpening it must be made with cooling in the water.

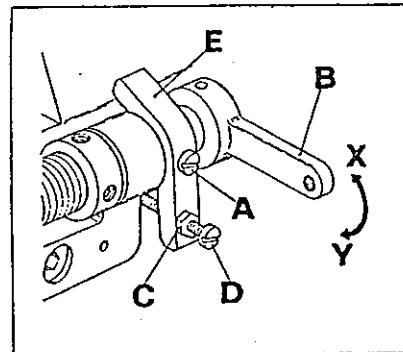

Upper Knife is made of Special Super Steel Alloy, so it is needless to re-sharpen about one year. And the provisional one must be ready always as the Knife cannot be sharpened by the ordinary grinder. When necessary, please report us or the dealer who sold the machine to you.

5 - 6 Upper Knife Drop Mechanism

The Upper Knife Drop Mechanism is provided on Fabric Cutting Device of this machine, and the Mechanism has been adjusted not to operate at the shipment.

* To operate the Mechanism: -

- 1) Make Needles up to their highest position.
(Upper Knife, at its highest position, will be 4.0 mm. higher than the top face of Stitch Plate.)
- 2) Loosen Upper Knife Adjusting Stopper Screw (A).
- 3) Raise Upper Knife Drop Lever (B) to the direction (X) and tighten Screw (A) at the position where the Knife lowers to the bottom.
- 4) Loosen Lock Nut (C) and turn Stopper Screw (D) to left. And, tighten the Nut (C) when the point of Upper Knife comes to 4.0 mm. over the top face of Stitch Plate.

When the Mechanism is used, connect Knee Press with Upper Knife Drop Lever (B), then push Knee Press softly with your knee. At this moment, Upper Knife comes down to stop its operation. Upon releasing your knee from Knee Press, Upper Knife will commence its operation.

* To suspend the use of Mechanism: -

When the Mechanism is not used, it must restore the original state at the shipment in consideration of the durability.

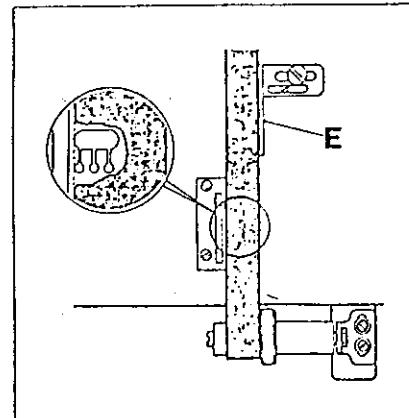

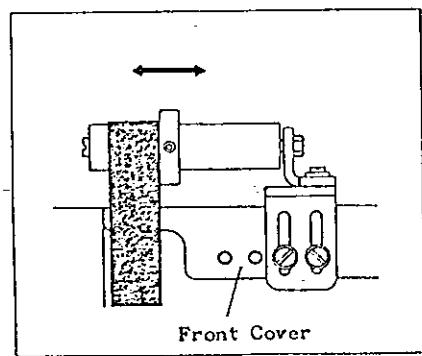

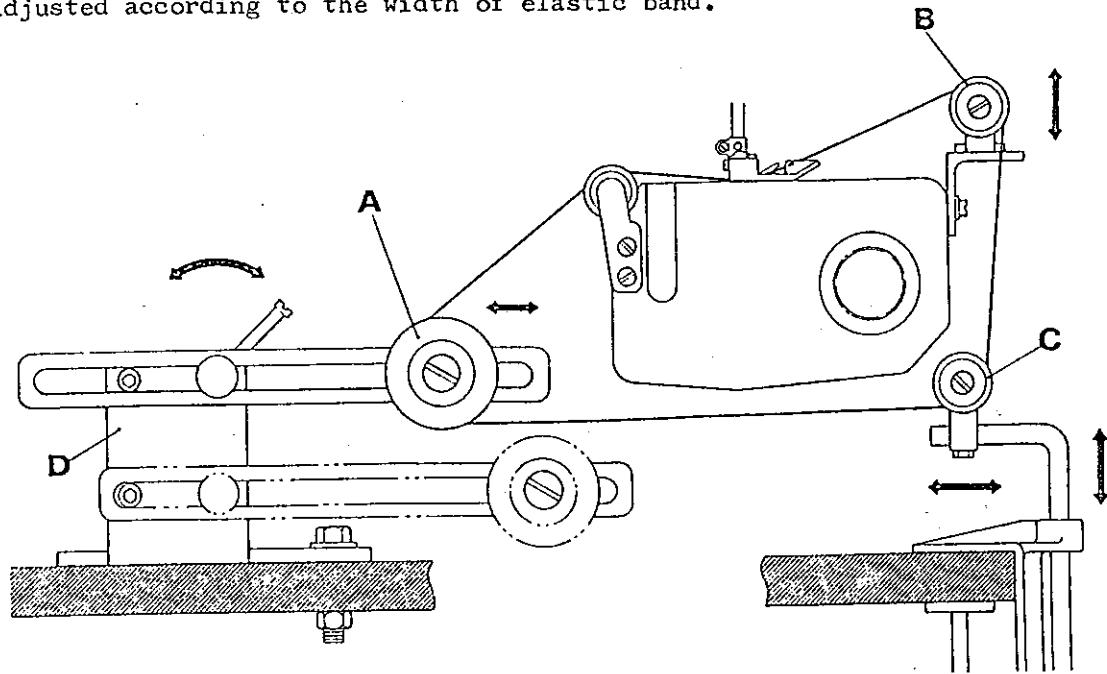

- 1) Make Needles up to their highest position.
- 2) Loosen Lock Nut (C) and turn Stopper Screw (D) until Upper Knife Adjusting Stopper (E) touches the Machine Frame. Then, tighten Lock Nut (C).
- 3) Loosen Adjusting Stopper Screw (A).
- 4) Lower Upper Knife Drop Lever (B) to the direction (Y) and tighten Screw (A) when the point of Upper Knife reaches 4.0 mm. higher than the top face of Stitch Plate.

6. Adjustment of Rollers

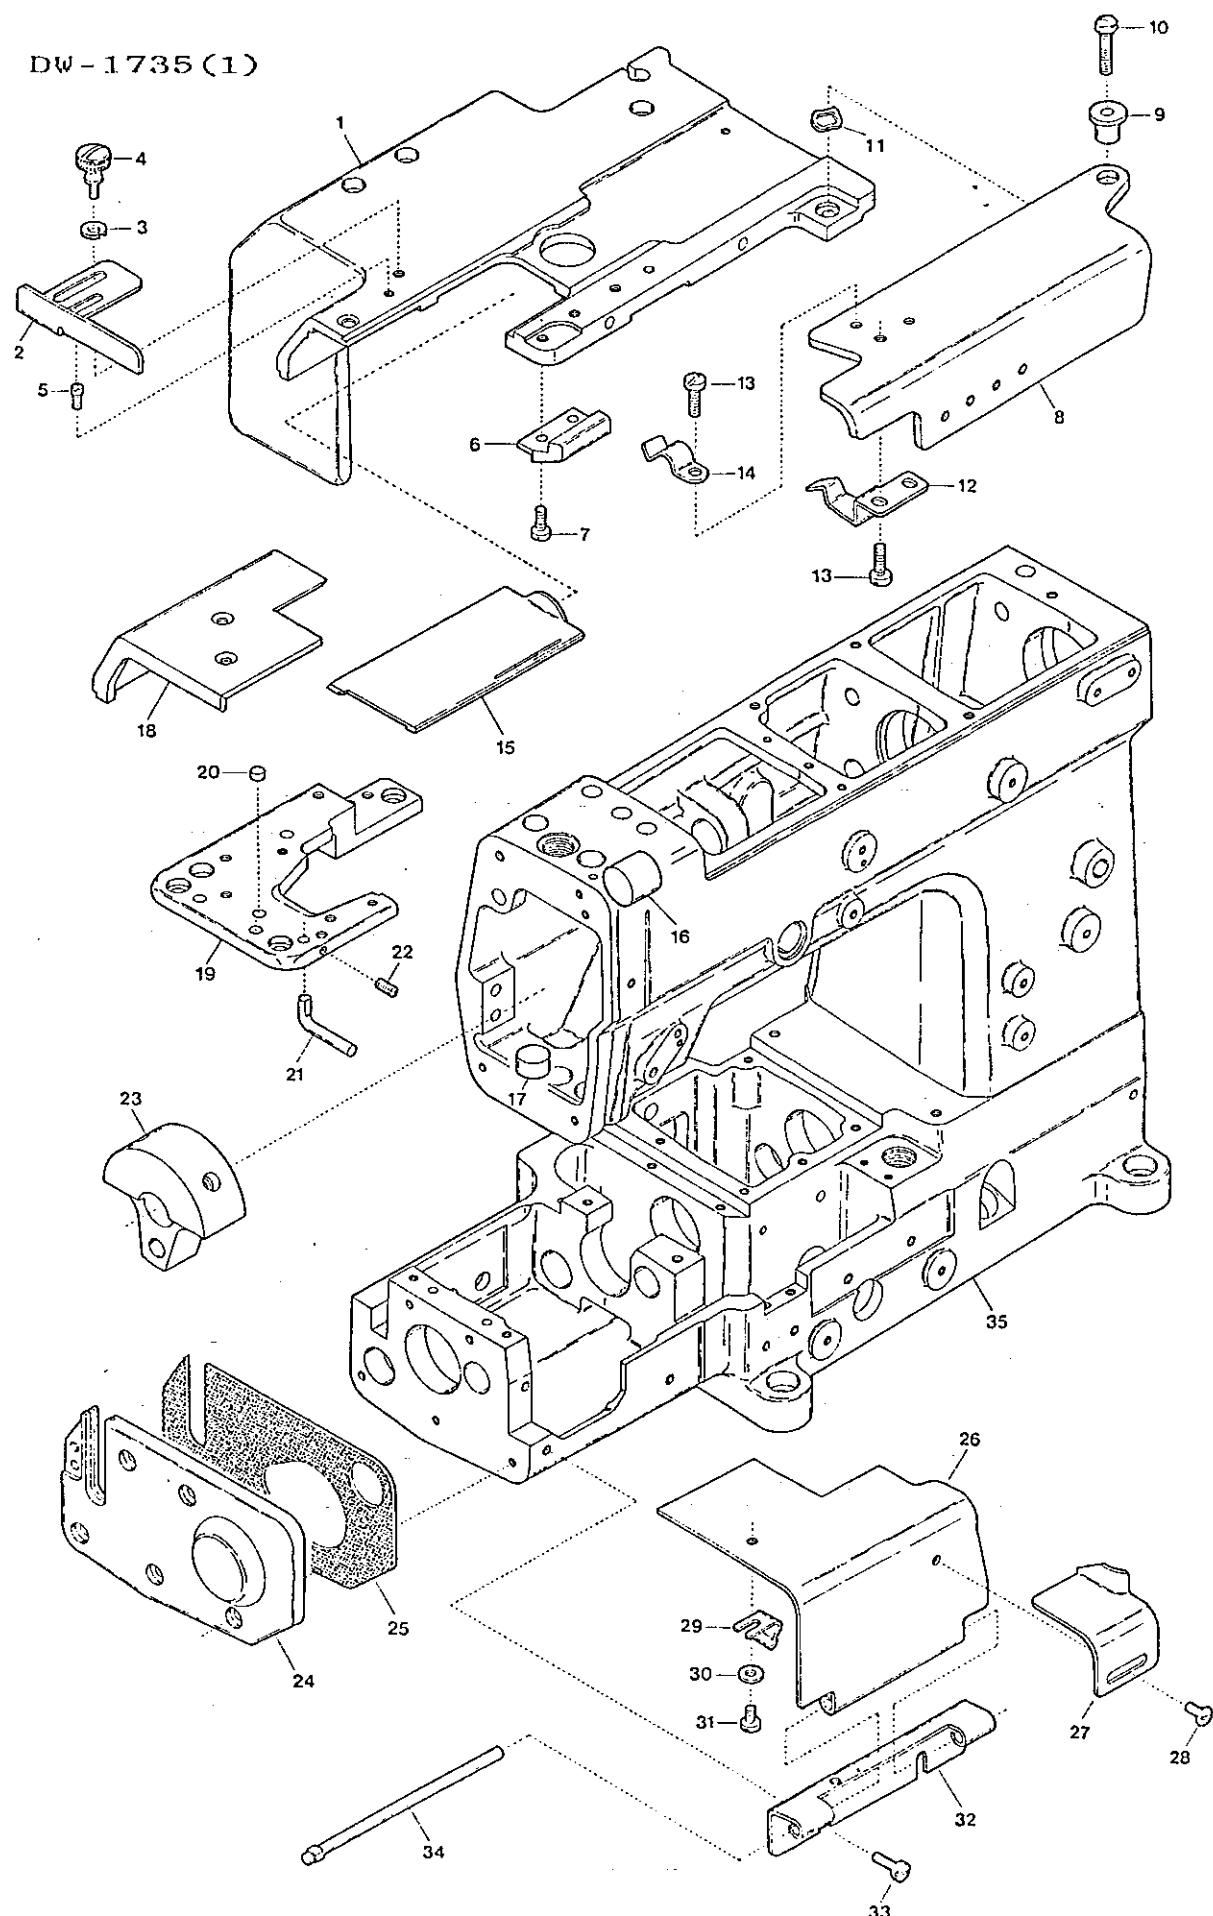

Tension Roller (A), Elastic Tape Roller (Front) (Upper) (B) and (Lower) (C) shall be set at the suitable position respectively according to size of the body of garment.

Tension Roller (A) can be adjusted longitudinally by loosening the Lever and set at the lower portion of its Holder (D) as occasion demands.

Elastic Tape Roller (Front) (Upper) (B) must be set at the right side of Front Cover. And, position of each Roller and Elastic Tape Guide (E) shall be adjusted according to the width of elastic band.
